LINES

WRITTEN BESIDE MY MOTHER'S GRAVE.

FOR THE SATURDAY EVENING POST.

The sun has set:
By this spot, while busy day is ending,
A pilgrim at some wayside altar bending,
I linger yet.

Sad and alone,
One once more to dream of old home pleasures,
Darker, mother, all the household treasures,
Forever gone.

A child again,
Look thee, mother, for thy evening blessing,
Ling how present in thy calm caressing
To soothe each pain.

Now can I prove
Slightly weigh the cold world's heartless scheming,
Empty praise, and words of friendly seeming,
Against thy love.

A mother's love!
Memory still opens my heart in pressing,
Ling me prize thy last faint-spoken blessing,
All else above.

This humble mound,
Though thy dust alone is hid beneath it,
O'er be, while summer flowers shall wreath it,
Love-hallowed ground.

Then art not here;
While I stray an earthling, weak and lonely,
Meet I kneel beside this tombstone holy,
To drop a tear.

Daylight is gone;
Heart, bewildered, from the spell that bound me;
Star-eyed keep watch, the winter night is round me,
I'm here alone.

Drying each tear,
Leave thy grave, (by thoughts of thee made stronger,)
Wrestle with earth's cares a little longer,
Then rest one here.

L. M. TENNEY.

CHAPTER XXIII.

THE RANCHO.

It is needless for me to detail our progress day by day in pursuit of the freebooters. We kept to our original design of encamping each night where they had encamped the night previous; and we had withal to be very cautious, lest we might be discovered by scouts of the main body, or surprised by roving bands of Camanches, over the eastern portion of whose territory our route lay for several days together. The trail of the bandits crossed the Colorado Hills and the Colorado River, above Austin, the capital of Texas, and thence took a southerly course, avoiding all settlements, and much of the way, as before remarked, passing over the wilderness known as the Camanche-Range.

Scarcely a day passed that we were not obliged to ford or swim some stream; and often we met with delays that taxed our utmost exertions to repair. As we drew near the frontier of Mexico, these delays became more frequent, owing to the country being infested with small parties of Indians and Guerrillas, who roved about in quest of stragglers or small parties that they might attack and plunder with impunity, being too cowardly to risk an affray with any body of men of anything like equal numbers. Consequently, while our foes could proceed without any risk, we were often obliged to conceal ourselves in thickets, or climb trees, and there wait with what patience we could till we could see our route clear of these petty plunderers. Most of our nights now we also passed in the branches of trees; for we no longer considered it safe to lie by a fire, even with one of us on the watch, as we had previously done.

At last, after a toilsome and perilous march of many days, during which we lived mostly on fresh meat, with occasionally some fruit and berries, sleeping on the ground in the open air, or in the tops of trees, we arrived one eve, just as the sun was sinking gloriously in the West, in sight of a Mexican ranche.

As the trail we had followed led directly thither, and as we perceived a couple of sentinels slowly walking up and down the flat roof of the main building, within the walls, we naturally came to the conclusion that our friends and enemies were quartered inside. Our position, when we made this discovery, was on rising ground, in the edge of a wood; and the ranche was nearly half a mile distant, in the centre of a cultivated clearing; consequently, though we could see what was taking place there, we ran little or no risk of being seen ourselves.

"The villains are yonder, without doubt," said Harley, drawing a long breath, and keeping his eye steadily fixed upon the ranche.

"At last, then, we have tracked them to a burrow," sighed I, thinking of Clara.

"It is time," rejoined Walter; "for another such a tramp would leave us naked."

In truth we were in a sad plight—our clothes dirty and ragged, having been nearly torn from us by the thorns of the chaparral through which we had passed—our beards long—our feet bare, swollen and sore—and our hands, arms, face, neck, body and legs, scarcely with out a scratch for the size of our palms.

"And what is to be done now?" was the next question asked; which led to a consultation, and finally to the decision, that we should remain where we were till after nightfall, and then set forward and carefully reconnoitre the ranche, and endeavor to ascertain for a certainty whether it contained the persons we were seeking or not.

Accordingly, we seated ourselves on the borders of the wood and clearing, and proceeded to make our evening meal on some meat which we had roasted the day previous, and since carried with us, to avoid the necessity of kindling a fire in any place where the safety of such a proceeding should be considered doubtful.

The sun went down in a bright bed of golden yellow, and the whole scene before us gradually faded away, and became lost in darkness. For an hour longer we sat conversing in low tones, the subject of course being that which lay nearest our hearts.

"And should this prove to be D'Estang's band of ruffians, what are we to do?" inquired Walter, anxiously.

"Let us ascertain that first," answered Harley, "and then meet here to consult on future operations. Providence has wonderfully aided us so far—let us not prove unworthy by failing to trust something to Providence now."

"I would I knew in what part of the country we are!" said I.

"That we may not know till some one tells us," rejoined Harley. "Come! I think we can venture forward now in safety. If by any chance we become separated, remember this spot must be our rendezvous. Hark!"

As the last word was uttered, a strain of lively music came floating up to us on the still air from the ranche.

"That sounds of merry-making," said I.

"A fandango," returned Walter.

"Fate favors us," observed Harley; "and so, while the dance is going on, let us forward and reconnoitre."

We set off accordingly; and in the course of a quarter of an hour approached the ranche with great caution. The music was still in full blast, the air quick and inspiring, and we could hear the feet of the dancers keeping excellent time; while the constant hum of voices, and every now and then a soft, melodious laugh which also greeted our ears, told us that many were here collected of both sexes.

But though we could distinctly hear, we could not see a living soul; for the ranche was surrounded by an adobe wall, some twelve or fifteen feet high. We crept up to the wall in the most stealthy manner, and cautiously made its entire circuit, without finding a cranny through which we could get a single glimpse of the dancers. We could hear the voices of many speaking together, which prevented our distinguishing anything that was said; though we could make out that there were two distinct parties—one of whom spoke English and the other Spanish—and that each, in trying to pay the other a compliment, by addressing him in language not his own, unitedly produced a jargon worthy of Babel.

Having listened as long as we thought necessary or prudent, we silently withdrew to a safe distance, in order to hold a consultation, and decide on what should be our next proceedings.

"Well," said Harley, in a low tone, "I have no doubt that D'Estang and his men, or at least a portion of them, are in yonder ranche; and that they are there united for the present, if not permanently, with another band of cut-throats of Mexican origin."

"This being granted," said Walter, "what can we do to effect the liberation of my father and sister?"

"Nothing, of ourselves alone, while they remain in such force," replied Harley.

"Which seems equivalent to saying that we have journied hither in vain," said I, dejectedly.

"Well, that may or may not be; but I think the latter," rejoined my friend.

"Have you anything to propose?" asked Walter, anxiously.

"Yes, I have two propositions to lay before you."

"Go on."

"The first is, that we take up our quarters in the neighboring wood, and there remain on the watch. It is possible that this ranche may for the present be used as a rendezvous, and that the captives will be left here under a small guard, while the main body sallies forth on a short expedition for plunder. At all events, such a large body of armed men will not long remain idle; and whether they leave their prisoners or take them with them, by remaining where we can watch their movements, we shall be likely to come at the truth one way or the other. Now if the prisoners are left behind under a small guard, it is possible, by watching, we may find a favorable opportunity to rush upon them, and, by taking them by surprise, overpower them; and if the prisoners are not left behind, then we shall be ready to follow the whole party as we have done heretofore, and determine our future actions by future circumstances. This is my first proposition."

"And a more hopeful one than I had thought could be made," replied Walter.

"Now for the second proposition," said I.

"The second is," pursued Harley, "that we at once set off and seek for a force equal to their own, and with this come upon them suddenly and give them battle."

"But where can we find such a force to aid us?" inquired I, in surprise and some dismay, lest the reply should prove that the mind of my friend was again wandering.

"Why," answered Harley, "I think such force might be found with Taylor's army."

"Taylor's army!" echoed both Walter and myself in the same breath. "And where, my dear Morton," continued I, fears for my friend's sanity rather increased than diminished by this reply—"where do you suppose Taylor's army to be at this moment, that you refer to it with such an air of confidence?"

"Much less distant than you think, judging by the tone of surprise in which you ask the question."

"Certainly much less distant than I think, Morton, if anywhere within a reasonable journey," said I.

"Well, within a reasonable journey I am ready to wager it is," he rejoined, in the same confident tone.

"And what reasons have you for so thinking?" inquired Walter.

"Many, sir," replied Harley, "which I was not prepared to give a half hour since, when Harry here was wishing he knew in what part of the country we are. I have since been pondering upon the matter, and have at length arrived at a conclusion which I might have come at sooner, had I sooner taken the subject into serious consideration. To begin then with my reasons:

"In the first place, about a year ago, I had occasion to study a map of Texas; which I did so thoroughly and retentively, as to fix in my mind the locality of the principal towns and rivers, and also the distance from one to the other. Now remembering the course we took from Houston, and the number of days we were on the journey, together with the probable distance of each day's travel, I am thus enabled to form a pretty correct idea of the part of the country in which the Indian village was situated; and by making the same calculation of our journey since quitting it, I think I can guess pretty accurately of our present whereabouts."

"And pray then where are we?" inquired I, eagerly; for though I have since traced our route on the map, I had at this time no definite idea of the part of the country we were in; and the information I have occasionally given the reader of different localities, in the course of our journeyings, was found out afterward.

"Well, then, to the best of my belief," replied Harley, "we are in the province of San Patricio, and not many leagues from where the Rio Grande empties into the Gulf of Mexico; and consequently, if Taylor has pushed his army forward to Point Isabel, as by the last rumor that reached me he was about to do, and has not since changed his quarters, we are not many leagues distant from him."

"By heavens!" exclaimed Walter, in a very excited tone, though he prudently spoke low. "If your conjectures should prove correct, Mr. Harley, these villains will do well to escape the punishment they deserve; for I will at once to Taylor's camp; and if I can fall in with Walker and his Texas-Rangers, it will only be necessary to mention to him the name and captivity of my father, to enlist him at once in our behalf."

"I am glad to hear you speak so confidently of obtaining assistance," rejoined Harley; "and to prove my surmises correct, I will advance these arguments. First, on our way hither, we have routedly seen, much to our annoyance and alarm, several small parties prowling about, evidently in quest of plunder. These, doubtless, are the human wolves or vultures which hang upon the outskirts of the army, ready, whenever a battle is fought, to come in for the best share of the plunder; but too cowardly to attempt to take it from an equal or unconquered foe."

"Nothing more likely," said Walter.

"Secondly," pursued Harley, "you will recollect that I told you, from the conversation overheard between D'Estang and Warncliff, that I judged their intended destination to be the frontier of Mexico: now would they be likely to stop short of their destination—at least any considerable distance—and idle away their time in revelry?"

"Ha! that is true," exclaimed Walter.

"Thirdly," continued my friend, "we know that there are many females in yonder ranche, and that it is not reasonable to suppose they belong there; and if they do not belong there, whence come they, unless from some near town? for neighbors here are scarce; and if from some near town, that town must be on the Rio Grande, for there can be no other in this vicinity."

"I am convinced," rejoined Walter, "that your conjectures are well founded. Now then to act accordingly. In the first place, you being right in your surmises, there must be a road, or at least a mule-path, leading from this ranche to the town in question; and therefore let it be our first care to find this and follow it, till we chance upon some one from whom we can gather correct information, both as to the name of the town and the exact position of, and distance to, the American army."

"I see nothing to object to this," replied Harley.

"With all due respect for your surmises and plans," said I, "I think there is one important conjecture that should be made a certainty before we act as if it were so—for this is truly the keystone to the whole arch of your calculations."

"Ha! well, what is it, Harry?" said Harley.

"Why, you have taken it for granted that the banditti we seek, and their captives, are within yonder ranche. Now if this should prove to be another party—"

"Ha! by my life!" interrupted Harley—"I see we have taken too much for granted. We must be certain this is D'Estang's band, Walter, ere we make an effort against them—otherwise we may let the real villains and our friends escape us."

"True! true!" answered Walter; "but how are we to ascertain this fact in time to be of any benefit to us?"

"I have a plan," said I. "In passing around the walls of the ranche, I observed a stick of timber leaning against one, by which I think I could mount to the top and get a view of what is taking place inside."

"But this would put your life in peril," said Harley, anxiously.

"It has been in peril a long time, my friend," I replied; "and we cannot hope to defeat our foes and regain our friends without new risks."

After some further discussion, it was settled that I should immediately proceed to put my plan in execution—I promising on my part to be very prudent and cautious, and exacting from my friends their solemn pledge in return, that in case I should by any accident again fall into the hands of my enemies, they would not attempt a rescue without sufficient force; but instantly depart and seek succor, without approaching any nearer to the ranche, that it might not be discovered I had accomplices, which would certainly put the villains on their guard against surprise, and perhaps lie the worse for me in other respects."

I now shook hands with Morton and Walter, and parted from them as for the last time; for there was no telling what might happen; and I was not without forebodings that I should get into fresh difficulty. I set off, however, with a tolerably stout heart; and in a few minutes had reached the ranche and climbed to the top of the wall, without meeting with any accident.

Here I found, what I had not anticipated, namely, that from this wall I could get no view of the parties within—for the main building of the ranche here formed an inner wall about six feet distant from the other, and the dance was apparently taking place on the other side of this, in an uncovered area. And besides, I could not pass from the wall I was on to another, because the corners were flanked with circular bastions. I could see the gleam of the lights, though not the lights themselves, and hear the music, the tread of feet, and a loud buzz of conversation; and having ventured thus far, I determined, imprudently enough, to venture still further.

With this intent, I soon discovered that one corner of the building projected within three feet of me; and standing up, and leaning over, I managed to reach this with my hands; and after a severe effort, during which I came near being precipitated to the ground below, I succeeded in clambering upon it. Moving carefully over the flat roof to the opposite side, I now had a fair view of what I had sought.

The area, formed by the surrounding buildings, was large; and in this, standing in a circle, were perhaps a hundred persons of both sexes, watching the motions of some ten or twelve others who were dancing in the centre. Torches and lamps were plenty; and in the bright light thus made, I recognised several of the villainous faces of Warncliff's detachment—but could no where see him or D'Estang. The females, of whom there appeared to be about twenty in all, were mostly young, were dressed in white, and many of them were extremely good-looking. Their dark shine, black eyes, and raven tresses, proclaimed them of Mexican or Spanish origin; and the beautiful forms of those in the dance, certainly moved with a grace and ease that would not have disgraced a fashionable ballroom of my own country.

While I was yet looking, the music ceased, and the set broke up; and while another was forming, I prudently thought of withdrawing; but just at this instant I became spell-bound by the sound of Warncliff's voice.

"Come along!" he said, roughly; "you must dance with me, and there is no use of whining about it! I am master here, and will be obeyed."

There was a low, tremulous reply—the words I did not hear—but the tones seemed to thrill through every nerve and fibre of my body. I could not mistake the voice among a thousand—it came from the lips of Clara Moreland. The speakers seemed to be under me—but yet I could not see them. In my excited state of mind, I impatiently, impudently, raised myself and leaned forward. But alas! in doing so, I lost my balance; and finding I must go down, I made a spring, and landed in the very midst of the freebooters and their associates.

CHAPTER XXIV.

FROM IMPENDING DEATH TO A DUNGEON.

Had an angel suddenly descended from Heaven into the midst of that circle, I doubt that those who recognised me would have been more astonished.

"A ghost! a ghost!" they shouted, with blanched faces, while the females drew back with shrieks of alarm.

A scene of general confusion ensued—every one seeming surprised, if not terrified—during which I could distinguish the cries of:

"The ranche is attacked!"

"Seize the scoundrel!"

"Shoot him down!"

"No! no! don't fire!—it's a ghost!—it's the man that was hung!"

I had alighted on my feet; and though considerably jarred, was not injured; and with perfect presence of mind I drew my pistols, and looked eagerly around, in the hope that I might, by taking advantage of the alarm and confusion, in some miraculous manner effect my escape. Through what appeared to be the main doorway lay my way to one of the gates; and thinking it possible it might not be barred, I darted forward in that direction, shouting to those before me to stand aside or take the consequences. Instinctively they gave way; and I had already broken through the circle, and entered the dwelling, when I heard a rush behind me, and the cries of:

"Take him! take him!—don't let him escape!—he's live enough—he's no ghost," &c. &c.

Too soon for me the different parties had recovered from the inaction of a first surprise; and the consequence was, that I was seized by some two or three stalwart fellows, who instantly bore me to the ground and disarmed me.

"Don't kill him! Bring him out alive! We want to see him!" cried the excited crowd who could not press into the house; and immediately I was lifted and borne out into the area, where I had so unceremoniously made my first appearance.

Here I was cast upon the ground; and for a few minutes was in danger of being crushed under the feet of the surging mass, each of whom was struggling with his neighbor to get a sight of me.

"Fall back! fall back, men!" now cried a loud voice, which I instantly recognised as Warncliff's; and immediately a circle was cleared around me, and my hated rival advanced to my side.

My face was turned from him; and he evidently had not heard my name mentioned, nor had the remotest idea that the being he had consigned to an awful death was living and in his presence; for he addressed me sternly.

"Who are you, fellow," he said, "that have rained down here to cause this disturbance?"

I quickly gathered myself upon my feet, and silently confronted him. The moment his eye fell upon mine, he staggered back, with a yell of horror—the blood forsook his face—even his lips grew white—and I believe he would have fallen, had not one of his men behind given him support. It was some moments before he sufficiently recovered himself to again address me; and even then he rather gasped than said:

"Henry Walton: are you alive or dead?"

"Villain! coward!" cried I: "does your guilty conscience rather make you fear the dead than the living?"

The sound of my voice seemed to reassure him; and as the blood rushed back into his face, he exclaimed, angrily, perhaps to cover the shame and confusion he felt for his recent display of terror:

"So, then, you are alive! and I have been tricked, deceived. Where are the traitors? By heavens! I have a mind to make hanging examples of them!"

"You have no reason to find fault with your tools," said I; "for they are after your own heart in villainy, and did their hellish work as well as you could have done it yourself."

"Tis false! else how are you here alive?"

"There is a Power above yours," rejoined I, solemnly, pointing upward. Warncliff, and those who surrounded us, involuntarily, as it were, looked heavenward, as if expecting to behold the Power of which I spoke. "You cannot see it now," continued I; "but it is there, nevertheless; and ere long you will feel it in terrors more dreadful than those you but now experienced."

"Pshaw!" exclaimed Warncliff, impatiently; "are you mad? or a fool? or have you turned priest, and come here to preach? But no matter; if my orders had been executed, you could not be here now; and therefore I say, I have been deceived by a couple of treacherous scoundrels."

"If you mean me by that char remark, I say you lie!" cried a voice behind me; and the next moment Warncliff was confronted with the very ruffian who had placed the rope around my neck and led the horse from under me.

"This to me, fellow?" shouted Warncliff, half choking with rage, and thrusting his hand into his bosom, as if in search of a weapon.

"Take care!" thundered the other, instantly presenting a pistol to the head of Warncliff; "if you dare to lay your hand on steel, I'll blow your cursed brains out!"

"Mutiny! mutiny!" cried several voices.

"No mutiny about it," roared the big ruffian; "and if there was, I don't care a ——! He's called me a treacherous scoundrel; and he's got to eat his words, or die, by ——!"

"Well, well, perhaps I was hasty," returned Warncliff, in an altered tone, who felt that he was in the ruffian's power, and judged it politic to speak him fair. "I was angry at the thought that this man, whom I hate, had escaped the death to which I doomed him; and in the heat of the moment I made use of words whose meaning I did not consider, nor on whom they would reflect. Now tell me, Jack—if you saw him executed, as you reported—how is it I see him here, alive?"

"Don't know, unless Old Nick cut him down," replied the other, gruffly. "If I saw him executed, indeed! I tell you, sir, these here hands put the rope round his neck, and these here eyes seen him hang, swinging in the air, as purty a piece of human flesh as ever a turkey-buzzard could wish to light on."

A roar of laughter followed this coarse speech, in which Warncliff affected to join.

"There, Jack," he said, "I believe you did your duty faithfully; and Old Nick, as you say, must have had a hand in his escape, surely. And now, mirah! (turning to me) tell me how it is I find you here? which is scarcely less marvellous than that you should have avoided the death to which I doomed you. How came you here? how have you treed to be the hundreds of miles? and what strange fancy could have induced you to voluntarily put yourself in my power again? Is it possible you have such a liking for hanging, that you wish to try it again?"

"And who says I am in your power?" replied I, affecting a coolness and confidence I did not feel. "Are you sure I am in your power again?"

"Ha! what mean these words?" he cried, in a tone which betrayed some anxiety, if not alarm. "Are you not alone? are you supported by others?"

"And have you so underrated me, as to think me foolish enough to come here alone, and quietly surrender myself to you?" I continued, perceiving that I had happily roused an apprehension in his mind, which if I could increase, by throwing out vague, mysterious hints in the same tone of confidence, might be of inestimable benefit to myself.

"By heavens!" he cried: "perhaps we are surrounded by an armed body! This comes of not keeping the sentinels to their duty. It is all my fault, I must acknowledge; and if any harm befall us, in consequence, I shall dread to meet the eye of our Captain when he returns."

Here was an unguarded admission that his Captain, Count D'Estang, was away; and I instantly seized upon the fact, and turned it to my advantage.

"You need not dread your Captain's return while I am held a prisoner," said I.

"What! is our Captain taken?" cried fifty voices; and I could see that the bare idea excited no little consternation.

"Then shoot the scoundrel that ventures here to tell us so!" exclaimed others.

"Hold!" said I. "Suppose the life of your chief depends on the manner in which I am treated?"

"It's all a —— lie!" put in Jack, who, keeping his place by my side, had been closely watching my countenance for some time. "You're a skeery set, the whole of ye," he continued; "or you'd see right through a yarn as loosely spun as this here chap's. Haint we been travelling right fast ever since he was hung? and how could he travel as fast afoot, track us here, and have a body of men at his heels? And besides, what could he find the men you fear? And if he wanted to hold parley with us, d'ye think he'd come tumbling over the roof, instead of knocking at the gate? Go away—you're green—you ain't scarcely worth a ——!"

"Right, Jack, by ——!" cried Warncliff, clapping him on the shoulder; "you have more sense than all of us put together. He has been lying—I see it clear enough; for if he came intentionally among us, why did he try to make his escape in the first instance? I understand it all now—thanks to you, Jack. He escaped from the rope by one means or another, and has been dogging our steps ever since; and having traced us here, he has watched his opportunity, climbed the walls, and mounted the roof, with a view of ascertaining our numbers, intending to get off unseen and go in quest of a force to lead against us. He is a spy upon us, and it will not do to let him escape. I leave it to you, however, my gallant men, to say what shall be done with him."

"Hang him again, or shoot him," cried fifty voices; "that's the way to fix spies."

"Do either at your peril!" said I, firmly and coolly, though I felt my heart sinking within me at the same time. "I tell you I am not alone," I continued, "as you may soon find to your cost. You seem to forget that Walter Moreland escaped from your treacherous designs as well as myself."

"And he cut you down? Ha! I see it all now," returned Warncliff, quickly.

"And if he did," said I, "is he your prisoner now? Ha! you see also there is one determined foe who is not in your clutches; and you will do well to believe he is not the only one: I tell you there are many more."

The assurance I as well assumed, seemed to stagger the freebooters, one and all. They knew not what they really had to fear, and consequently feared everything. Had D'Estang been with them, the case would have been different; but he was away, and possibly might be a prisoner, as I had hinted; and in this uncertainty they were afraid to proceed to extremes with me, lest a similar punishment should be visited upon him.

"To the walls, men, some of you, with torches, and carefully reconnoitre the ground below; while the rest of you prepare to make a sortie with me!" said Warncliff. "We will soon know if we have anything to fear; and if we have, what we have to fear."

"You may save yourselves the trouble of mounting the walls," said I; "for I assure you there is no foe beneath them. As to making a sortie, you can do as you like; but my advice to you is, not to go too far from your stronghold."

"Thank you!" returned Warncliff; "we will believe just so much of your story, and take just so much of your advice, as we think proper."

He then held a short consultation, in a low tone, with some half a dozen of his cut-throat gang; after which, he advanced to me and said:

"Hark you, sir! I do not know whether you have lied to us or not; but we shall probably learn the truth, one way or the other, in the course of the night; and if you have lied, you shall not outlive the rising of to-morrow's sun. Away with him to the dungeon! and if he escape my vengeance this time, by my father's soul! I swear to visit the severest penalty upon the heads of you who have him in charge!"

"I'll answer for him with my head this time," replied Jack; who, with another ruffian, immediately laid rough hands upon me, and led me away.

They conducted me into an old building, which appeared to be used as a granary; but ere I entered it, I saw the females grouped together in another building, in company with some twelve or fifteen hang-dog looking fellows, whose style of dress and swarthy complexions denoted them to be Mexicans. All were staring at me with vulgar curiosity, and no doubt wondering among themselves what could be the meaning of all they saw—for they evidently did not understand sufficient English to render the matter clear to them.

I scanned the group eagerly, and ran my eye rapidly around all the buildings, in the expectation of seeing Clara. But I was disappointed; for she, little dreaming who was so near her, had probably withdrawn herself to an inner apartment; or else did not feel interest enough in what was going on to even bestow a look upon it; or, peradventure, and this idea was not a pleasant one, she might be a close prisoner, whom Warncliff, ere he took part in the scene described, might have hurried back to her place of confinement. But where was her father, Colonel Moreland, all this time? Was he here, a close prisoner also? or had a worse fate befallen him? I was strongly tempted to ask my ruffian-guard some questions concerning my friends; but believing I should only receive abuse in return, I kept my lips closed.

On entering the granary, my conductors lifted a trap door, and gruffly bade me descend. I did so, by means of a ladder, and found myself in a damp vault, where I could see nothing—for the light from the torches of my guard did not penetrate the pitchy blackness which now enveloped me. As soon as I was fairly down, the ladder was drawn up and the trap closed; and thus was I left in inky darkness, to solitary reflection.

And it will readily be believed that my reflections were not of the most pleasant character. Here was I again, in the hands of my enemy—an enemy without pity, who thirsted for my blood—and unless something almost miraculous should take place in my favor in the course of the night, I did not doubt that the rising of another sun would be the signal for my death. And what better place to put this fiendish design in execution, than the one now assigned me? I could not avoid a cold shudder, as the horrible idea rose in my mind that I might never leave it alive. My fate would at least be known to my friends, sooner or later; for Morton and Walter had both escaped, and doubtless were even now gone in quest of assistance; but it was not probable that assistance would arrive in the course of the night, even if procured at all; and therefore I could find little consolation in the idea that my remains might be discovered and given Christian burial. I thought of poor Clara; and I centured myself for my imprudence and carelessness; when, by a different course of action, I might have withdrawn, with all the information I had sought, without having discovered myself to my enemies, and thus put them on their guard and myself in their power. Sweet Clara! could I but free her with my life, I felt I would not hesitate a moment at the sacrifice; but to lose my life as I was now situated, and thus give my inhuman rival a double triumph, was an idea so terrible that it almost drove me mad.

Being left in my prison unshackled, I thought I might as well endeavor to ascertain its dimensions; and accordingly I began to grope about, moving very slowly and cautiously. The ground under me was cold and damp; and when I at length reached one of the walls, I found it covered with a thick coating of slime, that made me involuntarily recoil from the touch. The air, too, had a foul, sickly smell, such as one is likely to encounter on entering a damp charnel house; and I soon found that these disagreeable sensations were clogged my lungs, if I may be permitted the expression, that my respiration was affected with some difficulty; and I felt a heavy pressure upon my chest, similar to what one often experiences on retiring to bed immediately after partaking of a hearty supper.

Having reached the wall—for my descent into this loathsome place had been about central way—I began to make the circuit of my dungeon, keeping the slimy boundaries within reaching distance as a guide to my steps. I had proceeded in this manner some fifteen or twenty feet, and was slowly groping along beside the second wall, when I suddenly stumbled against a small heap of bones, which instantly emitted a startling phosphorescent light, and at the same moment a dull, heavy groan sounded in my ear.

I never was much given to a belief in supernatural appearances and manifestations; but situated as I was, laboring under intense nervous excitement, the reader will hardly doubt my word when I say that I involuntarily uttered a cry of horror, and reeled against the wall; while my blood seemed to curdle in my veins.

"And each particular hair to stand on end,
Like quills upon the fretful porcupine."

Not was my horror abated, when, venturing to scan the decaying bones by their own ghastly light, I perceived among them three human skulls, whose naked teeth grinned upon me hideously, and whose hollow sockets seemed to have eyes of fire. I closed my own eyes, to shut out the frightful scene, and made haste to withdraw from a contact with these remnants of mortality.

But though I turned my back upon them, and kept my eyes darkened, I seemed to see them as distinctly as before; till at last, made desperate by the horror I could not avoid, I resolutely faced them, half expecting to see them assume some other horrible form. Spell-bound, I gazed upon the revolting spectacle; while the awful idea took possession of my half-maddened brain, that foul murder had been done here—that foul murder might still be done here—that I might be the next victim—and that ere long my own bones might lie with these, peradventure to give out the same warning death-light to another victim coming after me.

Gradually I grew composed, so far as dread of supernatural appearances had troubled me; and in order to banish all fear by daring the worst, I walked up to the bones and seated myself upon them. I had not been in this position many minutes, when I heard the groan repeated which had so startled me at first. My mind being now in a state better fitted for reasoning, I began to look around me for a natural, rather than a supernatural, cause; and to find the cause, I traversed my dungeon, and searched every portion of it by the dim, phosphorescent light. I now became satisfied that no human being save myself was here confined; but it did not follow to my mind that no human being was confined in a dungeon contiguous to mine; and believing such to be the case, I said, in a loud tone:

"If you who groan have power of speech, pray answer me! Who are you? and where are you?"

"And who are you that asks?" replied a voice through one of the walls.

"A victim of villainy," I answered; "imprisoned in a dungeon that I may never leave."

"And I another," said the voice.

"Your name?"

"Moreland."

"Heavens!" exclaimed I: "Colonel Moreland!"

"The same—do you know me? who are you?" said the voice in the same breath, and in a tone that denoted surprise.

"I am Henry Walton," I answered.

"It cannot be; you are deceiving me; he perished by the halter."

"He was executed, but did not perish," I purposed, eagerly. "He was rescued by your son, to whom he owes his life."

"Walter! my son! is he alive? and where is he then?" cried the Colonel, in a quick, agitated tone.

I hastened to the spot from which the sound of the other's voice seemed to issue; and putting my lips near the wall, in a lower tone, lest we might be overheard, hurriedly communicated the leading events connected with myself since our separation—mentioning the escape of Harley, how we had followed the banditti, and what had led to my incarceration in my present gloomy abode.

"Thank God!" I heard him exclaim: "Walter is alive, and free, and vengeance does not sleep. I can bear up now, Mr. Walton," he continued—"for you have given me hope."

"And why are you, like myself, immured in a dungeon?" I inquired.

"Because I would not comply with the wishes of that human fiend, Warncliff, and urge my daughter to sacrifice herself to save me. He demands, as the price of my liberation, the hand of my daughter in lawful marriage, and an amount in gold that would beggar me; and he frankly gives as a reason for seeking this honorable alliance with Clara, when she is already in his power, that I, being proud of my family and connections, would not attempt to disgrace the husband of my child, to whose marriage I had consented, for the paltry consideration of revenge; and to make this doubly sure, he further demands that I swear, by all I hold sacred, never to molest, nor urge others to molest him; that I will never divulge what I know of him; and that in the event of his becoming involved in difficulty, I will stand forth as his friend. What motive he has in putting in the last mentioned clause, is more than I can tell; for if detected in any of his heinous crimes, I could not save him if I would; and it certainly argues a fear of detection, which his bold, high-handed villainies seem to contradict. He further says, that when the money shall have been paid over to him, at some place hereafter to be settled upon, I may then take my daughter home with me; but that meantime he will hold her as security; and as I deal by my oath, so will he by her."

"But you will not agree to his base proposals!" said I, anxiously.

"No! alone I know Walter lives, never, so help me Heaven!" he replied, with energy. "But hist! I hear a noise—perhaps some one is coming to me."

No more words passed between us for perhaps a quarter of an hour, when the Colonel again spoke, in a low tone:

"I think no one is listening; but it may be prudent for us to hold no further conversation for the present."

"A question or two first," I replied. "How long have you been confined in your dungeon?"

"Since yesterday eve."

"Are you at liberty to move about?"

"Yes! Can I do anything for you?"

"Not here; but should I be murdered, (I shuddered as the word passed my lips,) and you escape, I trust you will acquaint my friends with my fate?"

"Certainly I will—rely upon it—and avenge your death, if that be possible. Alas! young man, I grieve that you are here, for Warncliff hates you; and unless something Providentially snatches you from his power, you may give over hope of life."

"I know it—too well I know it," I replied.

"Through his misrepresentations, I was led, a while since, to do you injustice; for which, as we may never meet again, I crave your forgiveness."

"You have it, Colonel Moreland—you have it—and oh!——"

"Well, go on!" he said, as I paused.

"Will you do me a favor, Colonel?" I continued, in a hesitating tone.

"If in my power, as I hope for mercy, yes! Say on!"

In a tone tremulous with emotion, I continued:

"Should I perish here by the hands of the assassin, will you tell your gentle daughter—will you tell Clara—that—that—I thought of her—and prayed for her deliverance in the last awful moment of my existence?"

"I will! I will!" answered the Colonel, quickly. "Ah! Mr. Walton, you love her truly, I see; and should we all escape the toils thrown around us, believe me, I will not forget that you purified your life to save hers."

"Thanks!" cried I: "thanks! you rob death of half its terrors, and yet make life dearer to me than ever. I have nothing more to ask. Farewell! and may Heaven's blessings be upon you and yours!"

About an hour after this conversation, I heard sounds of music, to which many feet kept time, indicating that the alarm caused by my appearance among the banditti had passed away, and that the dance was now renewed. An hour later, the revelry began to grow boisterous; and so continued till after midnight; when suddenly the sounds of merriment were changed to cries of alarm.

(TO BE CONTINUED.)

Pictures of Life.

THE MOTHER'S STORY.

FROM "A HERO AND OTHER TALES," BY THE AUTHOR OF "OLIVE," AND "THE COUSINS."

"Come, Willie and Wattie, before you go to bed, shall you not tell your mother a story?"

Mamma's *stories* were so rare, that at once there was a delighted assent, and all crowded round. I could see that little fireside group now; my aunt in her arm-chair, with Wattie on her knee, Grace lying on the sofa opposite, so smiling and content, with Norman sitting at her feet, and Willie too, who never would leave his elder brother on any account. In the intermediate space sprawled Hector, James, and I, dividing the hearth-rug with the big black cat, which Norman's waggery had christened Teakettle, on account of his color, his fondness for sitting close by—nay all but on the fire, and his habit of hissing indignantly at every opportunity.

"Now," began my aunt, "if my body knows what I am going to tell, they are not to say anything until it is over."

It was a mysterious commencement, and I paid attention. Every word almost of the story I remember to this day.

"Once upon a time—now, listen, Willie and Wattie, and, Jamie, do not be pulling poor Teakettle's tail—once upon a time, there were a papa and mamma living together at a manse far up in the Highlands. Perhaps Philip does not know what a manse is?"

Ay, but I did; always grown familiar with Scottish words. I at once stated that it was the clergyman's house.

"The minister's," said Aunt Marilroy, correcting me; "and this papa was a minister. He had an immense parish, all among the mountains; indeed, he had to ride sixty miles to get from one end to the other. In the Summer time he was often absent for whole days together, preaching among the hills, and leaving his wife and the little manse. It was a very small place. They lived there with only one servant to help the mistress in the house, and look after the two little boys."

"Two 'little boys,'" repeated Willie with grave interest. "Mamma, were they as big as Wattie and me?"

"I think so."

"Den, dey were not 'little boys,'" sturdily persisted Willie, whose reasoning and intellectual powers far surpassed his powers of language.

"Very well, they were big boys, then," said Norman, laughing; "only do not interrupt mamma."

Aunt Marilroy tried to go on, but very soon Willie, after a meditative silence, broke in again. "Please, tell me one ting, just one ting."

"Well, out with it!"

"Did de two 'little boys wear pinafores?"

Every body laughed, as indeed we often did at Willie; he required such very circumstantial descriptions of everything.

"Yes, I can answer for it; they did wear pinafores, which they tore just as often as Willie and Wattie do theirs, and often made mamma very sorry." Here Willie, quenched and humiliated, poked his fingers thoughtfully in his rosy mouth, and let the tale go on.

"These two brothers were near of an age, and as there were no more, except a tiny baby, they were left to play together a good deal, with no one looking after them except the servant-lassie who was their nurse.

"Dat was lazy, dat lazy," observed Willie, with the air of a person asserting a great fact; arguing, I suppose, that all nurses must bear the same name as his own.

"We'll call her lazy," answered the mamma, smiling. "They were very good little boys, especially the elder, and did not give lazy or mamma anything like much trouble at some other little boys I know. So they were allowed to run about the manse-garden and farm-yard, for the minister had a sort of farm, that is, he kept a horse and two cows, and had a few sheep feeding on the hill-side.

"There were two places about the yard where the children were forbidden to go; one was to

Foreign Letter.

A VISIT TO IRELAND.

WRITTEN FOR THE SATURDAY EVENING POST.

Dublin and its Suburbs—The Spacious Parks and Its Handsome Drives—O'Connell's Statue—Its Grandeur—Pleasing Wildness of Phœnix Park and its Beauties—A Ride on an Jaunting Car.

Dublin has the reputation of being one of the dullest cities in Christendom. Though my short stay there did not enable me to verify it, I can easily conceive that a longer residence might hasten belief, unless one had opportunities for testing the friendly, sociable, hospitable spirit of the inhabitants. With this, no one could become satisfied. The few days that I spent there were marked by an unusual social enjoyment, that I look back at Dublin as one of the most charming of cities. But if one looks for bustle and activity, he will be disappointed. No ships are lying in the harbor; the quays are innocent of bales and bales, and the streets do not swarm with buyers and sellers. The petty retail business that goes on there, is done so quietly that a stranger, fresh from Bold Street, Liverpool, would die of ennui. Though not touched by so many fine shops and warehouses as Liverpool or Glasgow, it is not inferior to them in the elegance of its buildings. Its streets bear a comparison with those of any other city in the kingdom, and the principal one, Sackville Street, for breadth and capacity for business, is the finest I have ever seen. But it seems dead, from 3 to 4 and from 6 to 8 o'clock. One may amuse himself as curiously as he pleases, without the fear of being carried off his feet, as in Cheapside, or of being run down by coachmen, as in Broadway or the Strand.

Dublin has something upon which she can pride herself, more than upon her broad avenues; her spacious Park. Oh, ye Philadelphians, who refused to make the Green outside a public Park, what think you of stepping suddenly out of a close-built city, into eighteen hundred acres of country; grand old trees, studded thickets, plains studded with grazing deer. The extent of Phœnix Park, covering a space not much inferior to the city itself, has prevented it from falling into the hands of speculators, and it lies there in the city, a beautiful remnant of nature. Enough of art to redeem it from rudeness, not enough to suggest to you the proximity of the city. The Parks of London are very fine, but they did not please me so well as this in Dublin. You see that they have been moved from the hands of the builder, but the seal of the city is upon them. In the furnace you can never forget yourself, and dream that the Great Babel is after all. In the latter, brick walls and dusty streets become obsolete ideas. Phœnix Park contains two very notable objects—at one extremity stands the Vice-Regal Palace, the residence of her Majesty's representative; at the other, the Zoological Gardens, the residence of the royal Bengal tiger and other brethren.

When one has but a short time to stay in a place, it is false economy to allow his notions of the Sense of things to interfere with the great object of his travels, to see whatever is to be seen. Now, it would have been more congenial to my feelings to have returned to my lodgings by the prettiest streets I could find, but instead of that, I passed through the St. Gilles's, the Liberties of Dublin. I thought I had found the climax of poverty and misery in my walks through London. I certainly had found the climax of degradation. But here I saw narrower streets, more dilapidated houses, more filth, supplying the place of clothing, to hide the nakedness of nature, than the most hideous of those would picture. The only business that was carried on, seemed to be in old furniture and old clothes, and some of the streets were fringed with old garments several removes from their original integrity, as well as their original gentility. There were all varieties of furniture, whose station, could they be told, would give a chronological history of the changes of taste of the last century. Many articles both of clothing and furniture would not have to stand at their exposure in any city in America. The former would be consigned to the rag bag, the latter to the fire. Doubtless there was a demand for them here. Nothing struck me more than the appearance of so many children in the streets. Every nook and corner swarmed with them. If Dublin could be taken as a type of Ireland, I think the fears that are entertained by the Irish, in regard to the depopulation of their country, might be considered entirely groundless.

But pleasant as the sight of children is to me in general, I could not cheer myself with their sight in this case. They seemed born to a lot worse than their lot. What is the cause of all this wretchedness? That I cannot say. Our thing I can say, however, that it cannot be attributed to intemperance. In this quarter of Dublin, drinking-houses are very rare. I have said that in London I saw less apparent poverty, but more degradation. Such is the fact. I was in places in London, where I did not care to show a pocket-book in broad daylight. To use a Yorkshire expression, there was a "vast" of ill-looking men and women in the streets, and in the gin-palaces. But in Dublin I saw none of this desperate, reckless, hardened, criminal look, that is more painful to see than the extremity of filth and destitution. Dublin, altogether, in much less advanced in dram-shops than any other large town in the kingdom, thanks to Father Matthew, and the steadfast faithfulness of his disciples. A few minutes walk from the poor quarter, brought me out upon St. Stephen's Square, an open space of nearly twenty acres, full of flowers and beautiful shrubbery, and surrounded by elegant mansions. It is a fashionable court in miniature, a world, too, between which and the lower there was little intercourse. Were the dwellers in these stately mansions not wretchedly near sighted, they would look beyond their beautiful Square, and see the squalor and misery in the distance.

Dublin, it is said, has two beautiful cemeteries. I visited only one of them; I found it neat, and well kept. Nowhere in Great Britain have I found cemeteries that an American can call beautiful. I was attracted to this cemetery, not with the hope of seeing anything remarkably elegant, but because I wished to see the resting-place and monument of a man whom I had admired while living—O'Connell. His monument is not such as a grateful people, trusting much in outward marks of respect, should raise to his memory. It is a plain pyramid, surmounting a vault in which lie the remains of the great Agitator. You descend a few steps and look upon the gigantic coffin that contains his dust. What a mighty man he was, living, and how quickly has his memory faded away. The wreaths that hang upon private tombs, hang not upon his. The grounds around speak of no revenantal care for the spot where he lies. But a starving people cannot build monuments. Pinching hunger leaves no room for gratitude and respect.

One of my most interesting visits was to the Bank of Ireland. I did not go to pay a note or draw a check, but to see the building where the old Irish Parliament met, and where O'Connell declared it should meet again. It has been much altered since it has become the seat of money-changers. The hall of the House of Commons, is now the main hall for business. Where some one was thrilling the eloquence of Irish orators, now are heard the clink of sovereigns, and the half-suppressed conversation of tellers and clerks. The Chamber of Peers is unchanged, except that a statue of George III. occupies the place once filled by the presiding officer. The room is very dark, and very plain, with long benches on each side. It reminded me of a class-room in one of our public schools. There were, however, two very fine pieces of old tapestry, such as I have never observed in public schools. One represented the Battle of the Boyne, the other the Siege of Londonderry: subjects not very well chosen to cement a cordial union between the two sections into which Ireland is divided. In the main hall of the Exchange, I found statues of O'Connell, Grattan, and of two or three other great Irishmen. The statue of O'Connell seemed to be quite poor. It gives him a brow and face noble as one could hope for; but, unless O'Connell was very bow-legged, the statue does him injustice. His mantle hangs about him, too, as if he had been cut in a sashing tub.

Wherever finds himself in Dublin, with two or three days to spare, may delude with himself, as I did, whether he should half see the Lakes of Killarney and come away dissatisfied, or go down into county Wicklow, to run the risk of finding that there was nothing to pay him for his trouble. I took the latter horn of the dilemma, and came back satisfied that though the beauties were far apart and hard to get at, they paid very good dividends when I found them. Wherever thinks that the pretty little basin of Lough Tay, almost hid from the sun by its high precipitous banks, with the element of water and the loveliest of margins, rejoicing in a country age, a perfect little paradise, is not worth a half-day's trudge across dreary fields and over stony hills; whoever thinks that the forty hundred, Lough Dan, with its bigness and polite manners, is hideous; whoever thinks that Glendalough, the seat of the Seven Churches, the ancient home of Irish civilization, religion and Literature, with its legends of saints, of giants, and of Kings, with its long headed and longer tongued guide, is a bore; whoever thinks that the "Meeting of the Waters" is very pretty to sing, but not so much to see; whoever thinks the "Devil's Glen," with its pretty waterfall, and its one-sided, overhanging precipices, does not establish the claims of his Satanic Majesty to the possession of a farm for the million, but not such visit county Wicklow. Strangers, who have merely become acquainted with my only remaining experience of this remarkable county, an acquaintance with its beggars, its half day fines, and with a tribe of the corporals, he may have proper blind and blunderings added on his account, which, if otherwise, would make the Kiss of Life, the fountain of health, the philosopher's stone, and all other needfuls to such human happiness, entirely useless to him. In half the time, and with no expense, he may see how speedily blunderings may be transmuted into coins.

On my way from Dublin to Kingstown, to take passage from Holyhead, I availed myself of an hour or two of leisure, to ride upon the atmospheric railway between Kingstown and Dalkey. As it is the only one of the kind in the world, it may be worth a description. An ordinary railway track, having many more curves than we usually find in them, with a large water-pipe running along the centre, will give you a pretty good idea of this railroad.—The pipe, instead of being perfectly tubular, has a rectangular trough about four inches wide and an inch deep, upon its upper surface. The floor of the trough consists of a great number of leathern valves, about a foot long; with a hinge-like connection at one side, and forming an air-tight connection with an iron bridge at the other. About two hundred yards from the Dalkey terminus, the tube leaves the track, but diverges to the air-pump house. The air-pump, of gigantic dimensions, the piston having four feet nine inches in diameter. The motive power is supplied by an engine of 110 horse power. At the Kingstown end, the double piston head, attached to the cars by a steel rod, enters the pipe, and then it is made air-tight. The moment the air is exhausted, the pressure behind puts the cars in motion. It is not desirable, however, that the train should move till a tolerably good vacuum is produced. To avoid a premature motion, a movable sliding valve separates the main tube from a chamber, a few yards in length, into which the piston head is made to enter. When the train is to move, the valve is drawn out, and away goes the train at the rate of twenty-five or thirty miles per hour. The piston rod is not connected with the triangular a perpendicular bar, but by long, thin curved plates, that slide between the leathern valves and the lodge upon which they rest. It is so far behind the piston heads that it cannot lift a valve, allowing the air to enter in advance of them, and thus the pressure is maintained behind them. The piston rod is susceptible of a slight lateral motion, and thus accommodates itself to curves in the road. The pressure of the atmosphere is only used in one direction. Gravity supplies its place as you return.

C. G.

Clippings.

☞ A Curiosity.—The editor of the Hartford Courant has seen a pair of infants' shoes, made in the year 1785. They were about four inches long and two inches wide, made of stiff leather, with soles and heels like a pair of hangers. What a contrast to the delicate little kid slippers which mothers put their children's feet into now.

☞ Natural Magic.—A pretty girl.

Shakespeare on Beauty.—Loving not wisely, but very well.—*Lantern.*

☞ Old Lettuce Still Ahead.—A woman in Trimble Co., near Bedford, a few days ago, gave birth to six children, two, and with no expense, he may see how speedily blessings may be transmuted into coins.

☞ A recent Chinese edict against the propagation of Christianity declares that 300 ounces of silver must be given as a reward to whoever will arrest an European minister, who shall be executed immediately; and 100 ounces of silver to whoever will arrest a native priest, who shall also be put to death. The catechists will be equally condemned to death, as also the chiefs of the villages in which they shall be arrested, and those who may have given them hospitality.

☞ "I thank God," (writes Washington Irving) "I was born on the noble banks of the Hudson! I think it an invaluable advantage to be born and brought up in the neighborhood of some grand and noble object in nature—a river, a lake, or a mountain. We make a friendship with it—we live in a manner sally ourselves to it for life. It remains an object of our pride and affections, a rallying point to call us home again after all our wanderings."

☞ When the Hon. Mrs. Norton was applied to, on Hood's death, for a contribution to the fund then raised for his destitute widow, and headed by Sir Robert Peel with the donation of £50, she promptly sent a liberal subscription, with the following lines, (never before published:)

To cheer the widow's heart in her distress,
To make provision for the fatherless,
Is but a Christian's duty, and none should
Resist the heart-opened of Widow Hood.

Poetry, punning and piety, all of the genuine sort, are not often thus happily united.

☞ The new novel by Miss Bronte (Currer Bell) is entitled "Villette." An inedited collection of letters from Madame De Stael to the Count Wolff de Baudissin, is about to appear. They are said to be exceedingly brilliant.

☞ At German theatres, the play, long as it is, never at half-past nine. If it were not over at that time, the audience would decline to wait for its conclusion; that being the hour of supper. If ever this hour be the least exceeded, a banging of box-doors—sounding like the irregular fire of a band of guerillas—is sure to be heard, and the house is cleared in no time.

☞ The annual loss of human life from tigers, in Bengal, says Captain Keppel, "chiefly among the Chinese settlers, is perfectly fearful, averaging no fewer than three hundred and sixty, or one per diem. Great exertions are still making for the destruction of these animals, which is effected by pitfalls, cages baited with a dog, goat, monkey, or other restless animal, and by sundry cunning contrivances."

☞ Bone-Knives in Our Larder.—Don't lend them.—*Punch.*

☞ A Hint to Oyster-Eaters.—When too many oysters have been incautiously eaten, and are felt lying cold and heavy on the stomach, we have an infallible and an immediate remedy in hot milk, of which half-a-pint may be drank, and it will quickly dissolve the oysters into a bland, creamy jelly. Weak and consumptive persons should always take this after their meal of oysters.—*Exchange Paper.*

☞ It was frankly stated by John Q. Adams, in one of his congressional speeches, that the four years during which he occupied the Presidential Chair, were the most unhappy years of his life.

A BEAUTIFUL COUPLET

The path of sorrow, and that path alone,
Leads to the land where sorrow is unknown.

☞ Aristabulus, the Athenian Philosopher, being asked by the tyrant, Dionysius, what was the difference between an Indian and an Irishman, replied: "The one carries a bow and a-row, while the other carries a 'oo and barrow."—*Knickerbocker.*

☞ The Gazette of Cincinnati says, we observed a flat-boat full of pig iron fastened to a house, on the levee—the heads coolly pitching each her into the river. When the river falls, their load will be left on the wharf.

☞ Herodotus makes mention of a nation, whose manner it was to assume mourning upon the birth of a child, on account of the ensuing miseries of this life, and to feast and rejoice upon a death, as being a rest from toil and labor.

☞ The following recipe for a cold is going the rounds of the papers: "Take three cents' worth of liquorice, and three cents' worth of gum arabic; put them into a quart of warm water, simmer them till thoroughly dissolved; then add three cents' worth of paregoric, and a like quantity of antimonial wine. Let it cool, and sip whenever the cough is troublesome.—Its cost is fifteen cents, and it is *said* to be "infallible."

☞ Wingless and worthless people generally take most pains to adorn themselves, as in the animal world insects are the gayest in color.

☞ In Rouen they carry round gas in casks for sale.

☞ An improved car-seat has been invented by William M. Warren, of Waterloo, O., who has taken measures to secure a patent. By this plan a person may adjust the seat in a moment of time, so as to make it convert into for sleeping on, merely by raising a hinged back—which is attached to another fixed back—the car-seat being fixed on pivots, so that it can be more or less depressed as the movable back is raised.

☞ Scalp Ornaments.—Some very pretty ornaments, made of the scalps of fishes, have been introduced into England from Brazil.

☞ Rabbi Joshua once met a boy, who carried something in a covered vessel. "My boy," said the Rabbi, "what have you in your covered vessel?" "It was intended for you to know," replied the boy, "it won't out be covered."

SATURDAY EVENING POST.

HENRY PETERSON, EDITOR.

PHILADELPHIA:
SATURDAY, MARCH 5, 1859.

ALL THE CONTENTS OF THE POST ARE SET UP EXPRESSLY FOR IT, AND IT ALONE. IT IS NOT A MERE REPRINT OF A DAILY PAPER.

TERMS, &c.

The terms of the POST are $2, if paid in advance—$3, if not paid in advance. For $5 in advance, one copy is sent three years. We continue the following low terms to Clubs, to be sent, in the city, to one address, and in the country to one Post Office:

4 Copies, - - - - - $5 00 Per Annum.
8 " (and one to Agent, or the getter up of the Club,) $10 00 "
12 " (and one to Agent, or the getter up of the Club,) $15 00 "
20 " (and one to Agent, or the getter up of the Club,) $20 00 "

Agents to Clubs.—Any person having sent the money and names for a Club, may add new names to it at the same rate, provided the latter will allow their subscriptions to end at the same time those of the main list do. We will willingly supply the back numbers if we have them. Our object is to have all the subscriptions in each Club, and at one and the same time, and thus prevent confusion.

The Money for Clubs must always be sent in advance. When the sum is large, a draft should be procured, if possible—the cost of which may be deducted from the amount.

Post Masters or others sending for Clubs, would confer a favor by having them sent to one address, when they can do so conveniently.

All persons addressing letters to us should be careful to give the name of the State, as well as of the town, in which they live. *All letters must be post-paid.*

Subscribers wishing their papers changed, will please give the name of the Post Office to be changed *from*, as well as the Post Office they wish it hereafter sent to.

We trust our old friends the Post Masters, will exert themselves and get up large Clubs for the Mammoth Post; or if they do not feel inclined to take advantage of our liberal offer themselves, that they will show our Prospectus to some other influential and responsible person who will be willing to do so.

OUR NOVELETS.

As we omit our Prospectus, on account of the crowded state of our columns, we may state, for the benefit of strangers who chance to see this number of the Post, that we design, at or before the expiration of Mr. Bennett's novelet of

CLARA MORELAND,

as circumstances may determine, commencing an original novelet, by Mrs. Lou Hentz, to be called

MISS THUSA'S SPINNING WHEEL.

At the conclusion of Mrs. Lou Hentz's novelet, we expect to publish a story called

A STRAY PATCH FROM AUNT HANNAH'S QUILT,

by Mrs. Frances D. Gage, well known to Western readers as the author of certain interesting household sketches, poems, &c. And follow that by another novelet from Mrs. Southworth, to be called

THE LOST HEIRESS;
A STORY OF NEWLEY HALL.

In addition to the above attractions, we are authorized by Grace Greenwood to announce a series of

LETTERS FROM EUROPE;

to be published in the course of the Spring and Summer months—including "letters from Rome, Naples, Florence, Switzerland, France and England."

Of course, the usual Miscellany of the paper, in the shape of selected stories, sketches and essays from the English magazines, general and political news, &c., shall not be neglected.

THE INFLUX OF GOLD.

The New York Tribune estimates that the increase of gold during the last two years, above the usual rate of increase, was about four per cent. on the whole amount of gold coin in the world. It further concludes that about four per cent. per annum will be a fair estimate of the increase in the future, from Californian and Australian sources. According to this calculation, whatever may be the prices of commodities, real estate, &c., is owing to the influx of gold—or, in other words, to the cheapening of the currency—should not exceed about eight per cent. Now we find that within the last two years, property in New York City has risen from 25 to 50 per cent., and probably in Philadelphia and the adjacent Districts from 15 to 25 per cent. And, therefore, according to the argument of the Tribune, prices of real estate are now, as a general thing, where they ought to be in about 1856 to 1860.

As corroborative of its estimate of the rate of the unusual increase of gold, the Tribune instances the price of British Consols, which have advanced some eight or nine per cent. in the last two or three years—and also a similar advance in the U. S. Loans. But for our part, we do not see why the price of these loans should be affected in proportion to the increase of gold. For, while on the one hand, a plenty of money may lead many to invest in such unquestionable loans, and thus increase their price through the influence of a great demand for them; yet, on the other hand, prudent purchasers would perceive that the value of such loans, and of the interest they yield, would be affected in proportion as the gold currency rises or falls in value. Government loans of course partaking in that depreciation which a lessening of the value of the precious metals invariably produces in all private loans, such as mortgages, ground rents, &c. He who lends when money is scarce and high, and is repaid when money is plenty and low, not receiving as much in real value as was borrowed of him.

But as to the recent rise in real estate in this city and New York—a rise which we suppose has been or will be followed by a general rise throughout the country—we incline to the view that it is not entirely, or even principally, owing to the recent large supplies of gold. In a new country like this, real estate naturally rises in value as the population increases. But it seems to be a characteristic of this species of property, to advance by sudden leaps, at long intervals, rather than by a gradual and constant progression. Thus real estate, in this city, remains steadily, at some price for some ten or fifteen years, when it will give a tremendous leap forward. It is only proper to add that it also generally overleaps the true mark, and that the next "bad times" compel it to fall back, though not to its original starting-place.

Now the great difficulty at any period like the present, is to tell how much of the advance in real estate is based upon the demands of an increased population—and, in the cities and towns, of a healthy and unalloyed business—and how much is the result of speculation, an expanded paper currency, and a false and illusive prosperity. Some shrewd calculators believe that real estate in this city is now as high as it will be twenty years hence; while others, equally shrewd, confiding in the signs of the times, and believing that the California and Australian mines are about to usher in a period of almost unequalled monetary prosperity, predict an increase upon present prices in the next twenty years, which shall cause the advance so far to appear mean and contemptible.

As to our own opinion—notwithstanding an editor is bound, according to some, right or wrong, never to admit himself corrected—we acknowledge, freely and unhesitatingly, that we cannot make up our mind which party has the best of the argument. Still, as an custom of caution is generally safer than an excess of rashness, we would advise our readers not to risk too much on the hope of a still farther great advance in prices. If you are offered a fair price, according to the times, for property which you would like to turn into cash, sell it. If you do not care particularly about selling it, hold on till the tide begins to turn or waver. So long as prices are going up, you need not give yourselves much uneasiness; but if they once begin to fall, you may take it as a tolerably sure indication that the top of the market is pretty nearly reached for the next ten or fifteen years.

Gen. Pierce.—The President elect appeared in both Halls of Congress on the 28th, and was impertinently surrounded in both places by crowds of members and others.

The Duchess of Sutherland.—John Sculle, an English gentleman, we believe, of some reputation, now in this country, is at its initio correcting the statements that have recently been published respecting the Duchess of Sutherland. It appears that the renowned of Highlanders was the work, not of the Duchess, but of her husband's mother, the Countess of Sutherland—better known as the Marchioness of Stafford. The Duchess of Sutherland was, at the time, about five years old. Of her, Mr. Scoble says:

The present Duchess of Sutherland is, as you are probably aware, the sister of the Earl of Carlisle, better known in this country as Lord Morpeth, a nobleman justly distinguished at home for his liberal opinions, and I may add, for the exalted opinion he is known to entertain of the institution of this country, slavery excepted. The Duke, her husband, though retired from public life in consequence of ill health, has always been the advocate of liberal measures; and the entire family connections constitute that portion of the British nobility from whom the British Democracy expect, and will receive the most. They united with Villiers, and Cobden and Bright in giving the people Free Trade; and they it is who will support the largest measure of Reform that the British Parliament, as at present constituted, can be induced to give. It is a singular fact that, with few exceptions, the oldest and the highest nobility in England are the most democratic in their principles, and that it is on them the people most confidently rely for support in the House of Peers in all their great struggles for increased political liberty, and for the general improvement of the institutions of the country.

Mr. Scoble further says that the Duchess of Sutherland is the best person against whom any one can bring a charge of oppression—that she is remarkable for her active benevolence, and elegantly free from those blemishes which mark the conduct of many high born persons. We are pleased that this refutation has been made, for while the Duchess of Sutherland always has been regarded one of the most beautiful of a beautiful array of women, she is the lady of whom Mrs. Norton has borne such noble testimony in the following lines:

"Ah, many are the alms the rich man spares
To sons of Genius, by misfortune beset;
But then gives not me, what woman seldom dares,
Belief—in spite of many a cold dissent—
When slandered and maligned, I stood apart
From those whom humbled power hath wrong, not crushed, my heart.

"Thou, then, when cowards fled away my name,
And scoffed to see me feebly stem the tide;
When some were kind on whom I had no claim,
And some frowned on whom my love relied,
And some, who might have battled for my sake,
Stood off in doubt, to see what turn the world would take—

"Then gave me that the poor do give the poor,
Kind words and holy wishes, and true tears;
The loved, the near of kin could do no more,
Who changed not with the gloom of varying years,
But clung the closer when I stood forlorn,
And blessed thee's deed with their indignant scorn.

"For they who credit crime, are they who feel
Their own hearts would to commission yon;
Memory, not judgment, prompts the thoughts which steal
O'er minds like these, on easy faith to win;
And tales of broken truth are still believed
Most readily by those who have themselves deceived.

"But like a white swan down a troubled stream,
Whose ruffled plumes hath the power to fling
Aside the turbid drops which darkly gleam
And mar the freshness of her snowy wing—
So thou, with queenly grace and gentle pride,
Along the world's dark waves in purity dost glide.

"Thy pale and pearly cheek was never made
To crimson with a faint, false-hearted shame;
Thou did'st not shrink—thy heart forgave—thy head,
Who hast in parks the object of their blame:
To thee the sad denial still held true,
For from thy own good thoughts thy heart in mercy drew.

"And though my faint and tributary rhymes
Add nothing to the glory of thy day,
Yet every poet hopes that after-times
Shall set some value on his votive lay;
And I would fain one gem's dued record,
Among the many each with which thy life is stored.

"So when these lines, made in a mournful hour,
Are idly opened to the stranger's eye,
A doom of thee, scoured by fancy's power,
Shall be the first to wander floating by;
And they who never saw thy lovely face,
Shall pause, to conjure up a vision of its grace!"

The Caloric Ship.—The "Ericsson" is said to have worked admirably on her recent trip to Alexandria, notwithstanding the stormy weather. She recently was visited by a distinguished party of Europeans, in scientific conjunction, in company with many naval officers, who are said to have expressed themselves very favorably. The amount of coal used is only one-eighth of the usual quantity for a steam vessel of the same power. There is no danger of explosions in the Ericsson,—if her engines are not, she will be the first steps, and that is all. Captain Ericson will have as he is a hurry, however, if the following be true:—

"A complete revolution in the means of steam navigation and locomotion is anticipated here by a recent invention of Dr. Carosio, of Genoa. He has, it is said, succeeded in computing a substitute for the decomposition of water by electro-magnetism, which will introduce the gas so generated into the engine, in a manner to save of the expense of fuel. His invention has been approved by savans and practical engineers, and a company has subscribed the means of giving it a full experiment. Means for the introduction of the new motive power in other countries. M. J. B. Muno, a respectable merchant of this city, has just started for the United States, with letters from our Minister at Turin, to the head of the Patent Office at Washington."

The American Pianist.—Unable ourselves to attend the private entertainment given last week by the distinguished American pianist, Mr. Gottschalk, to the editors of the city, we must depend upon our contemporaries for an opinion of his powers. And we feel less hesitation in doing this, as there appears to be but one sentiment on the subject. His performance everywhere are spoken of as evincing the highest abilities. The "North American" says:—"His style is bold or gentle, elaborate or simple, strong and sonorous, or low and sweet, just as the sentiment of the composition may demand, and in every movement he is equally admirable. The piece which produced the most marked impression was Yankee Doodle. The arrangement is highly original, and, as executed by the author, conveys, in the roll of the drums, the tramp of the soldiers, the rallying call of the trumpets, the booming cannon, and rattling roar of musquetry, a vivid idea of a battle, while the piece is concluded with a marvel of art in the simultaneous performance, in perfect harmony, and with entire distinctness, of the two national airs—Yankee Doodle and Hail Columbia."

A Paid Fire Department.—The meeting in favor of this great reform is described as a large and imposing one; and, probably, of the citizens who remained at home, three out of four were in favor of the object of the meeting. From statements made by Mr. Fraley, it appears that the rates of insurance on general merchandise in this city, have *doubled* in the last seven years, owing to the increase of incendiarism, the injudicious use of water, &c.—all traceable to the diseased and abused volunteer fire system. The loss of time to employers by their apprentices and workmen running to fires, with the pernicious effect upon the health, and often the morals, of such apprentices, also was dwelt upon. The resolutions, which are cogent and convincing, were adopted by a large majority; and we trust our legislators at Harrisburg will give us what at least three out of four of our population warmly desire. Any attempt to remedy the defects of the volunteer system will be utterly futile—its disease is a rotten and spreading cancer, and the only way to cure it is by putting a legislative bullet through its head.

Mr. Cobden's Bet.—The bet with Gen. Brotherton was, that Mr. Cobden would enter into a legal bond to pay £10,000 when the invasion of England by France takes place, to whoever would agree to pay one shilling a week to the Manchester Infirmary till the same period. Of course it was merely a figure of speech, but Lieutenant General Brotherton took him up, and Mr. Cobden, as a practical man, could not fly the course. Cobden went further, and, but the terms of the bet should interfere with General Brotherton's military duty, agreed to pay the bet when the invasion is *attempted*.

Frightening the New Yorkers.—The new route to California by Vera Cruz and Acapulco, by which the mails will be carried from New Orleans to San Francisco in sixteen days, is stirring up the New Yorkers. This is quite a bit of good fortune for New Orleans, which needed something of the kind—and, for our part, she is very welcome to it. We are great friends of an equilibrium as regards the great cities—though, of course, we will do all we can to put Philadelphia at the head of the heap.

Silver Mines.—It is stated that great excitement has been created in the towns on the Rio Grande, opposite El Paso, by the discovery of some very valuable silver mines on the eastern slope of the mountains, about sixty miles north-east of Doña Ana. It is said that one mine is so rich that the silver is extracted readily, by melting the ore with a common log fire of pine. There are also great masses of lead ore. *So it is said.*

☞ Fanny Fern.—See the advertisement of a volume from the spirited and witty pen of this new celebrity.

SUGGESTION TO GEN. CASS.

We would respectfully suggest to Gen. Cass, whether it is not probable that Great Britain has some dangerous designs upon the integrity of this continent, in her repeated expeditions to the neighborhood of the North Pole. Is it certain that Sir John Franklin is lost? Is it not rather exceedingly probable that he is meditating a colony transplant up in those Polar regions, in secret violation of the Monroe Doctrine? What, if some dark morning we should wake up and find that the United States would not turn round towards the sun, owing to a counteracting mechanical contrivance of the British colony at the North Pole? That would be a *n* sight for the great and glorious republic to be placed in. And, as Gen. Cass still retains large Great Britain is not a bit too good to be up to some such scheme—which would give her and the old world perpetual sunshine, at the cost to us of perpetual darkness. What a blow to our commerce, to our manufactures,—and what positive destruction to our agricultural interests. And is it likely that the principal object of these northern expeditions is the real one? A Passage to China! What would such a passage through frozen seas, and at the constant peril of the vessels, cargoes and crews, be worth? It is not reasonable to believe that Great Britain has any such ridiculous object. Her design evidently is, either to found a new colony among the Icebergs, in violation of the Monroe Doctrine; or to paralyze the North Pole, perhaps by means of ether or chloroform. We therefore call the attention of Gen. Cass to this subject, knowing that he is always on the alert against "perfidious Britain." Would it not be well for him to give a hint upon the subject to the Chairman of the Senate's Committee on Foreign Relations? Eternal vigilance and eight column speeches are the price of Liberty!

Proving Louis Napoleon the Great Beast.—A correspondent of the Somerset (N. Jersey) Whig, proves Louis Napoleon the Great Beast of Revelations, as follows:—

"Revelations, 13th Chapter, Verse 11th.—'And I beheld another beast coming up out of the earth, and he had two horns like a lamb, and he spoke as a dragon.'

"v. 12. And he exercisteth all the power of the first beast before him, and causeth the earth and them which dwell therein to worship the first beast, whose deadly wound was healed.

"v. 18. Here is wisdom. Let him that hath understanding count the number of the beast: for it is the number of a man; and his number is six hundred three score and six.'

"LOUIS NAPOLEON.
LUDOVICUS is the Latin for Louis.

L	- -	50
V	- -	5
D	- -	500
O	- -	5
I	- -	1
C	- -	100
U	- -	5
		666

The letters O and S are the signs for no numbers

"U and V are the same letter."

Considering that Louis Napoleon is the twentieth Louis that has filled the French throne, this is not very convincing. Probably this solution has done service before.

The Overland Journey to California.—A letter from a young physician, says that there is as much suffering on this route as ever. He draws the following appalling picture:—

Along the Blue Earth rivers, and some parts of the Platt, the cholera and diarrhœa raged to a terrible extent. I have seen hundreds of new-made graves in a single day. Death was in every train, and some lost nearly all their men. In the course of a few days in a company of 26, 17 died, and in another train there were not enough left to drive the teams. Many wagons were returning, driven sometimes by women who had lost their husbands and sons. All this suffering, instead of softening the heart, appeared to harden it to every meanness and crime. The "wheel" was called and the yet warm body of a brother, father, or sister half buried in a hastily-dug grave. The whip twangs above the cattle, which again move briskly on, excited by oaths and execrations, until another hak proclaims that another is dead or dying—murders were of frequent occurrence. Several women were found with arrows sent from one to car, and the bullet or bowie knife settled many quarrels among men.

Our party got on very well; although nearly always attacked by some one to steal, we lost seriously ill, only one death occurred. But many of us were amused to such hard and unremitting labor, and I felt much more my professional responsibility than I should under any other circumstances.

International Copyright.—While we do not know that we have any objection to a just and equitable International Copyright *Law*, we have a decided objection to an International Copyright *Treaty*. In the one case, it will be the open act of Congress; in the other, it will be the secret act of the President and Senate—and the people will not even know what the provisions of the Treaty are, in time to remonstrate against any mischievous or inexpedient ones. The proposition to make Mr. Bennett will project Treaty to provide for an International Copyright, which may be had before it, without regard to its character. We think it ill-judged on the part of the Administration, to allow the Treaty-making to encroach in this manner upon the proper domain of the Law-making powers.

The Dauphin Story.—Mr. Putnam has received a letter from the Prince de Joinville, relative to the claim of the Rev. Mr. Williams to be the Dauphin of France. The contents of the letter have not yet been promulged, but they are believed to put an extinguisher upon the claims of the Rev. Mr. Williams.

Apropos to this matter, a book recently published in France by a M. de Beauchesne, brings forward almost conclusive evidence that the Dauphin really died, as always alleged, in prison. M. de Beauchesne knew Gomin and Lasne, the last two guardians of the dauphin, and received from each a certificate, confirming his account of the Prince's death. Fac-similes of these original papers are given in his book.

The Pacific Railroad.—After trying during several sessions to resolve upon some unconsidered and extravagant project, the Senate finally settled down upon Mr. Bredhead's sensible proposition to have the various routes surveyed, estimates made of the cost of construction, &c. Why, even the Indians never set out in a hurry upon an important undertaking, but call a council and smoke more or less tobacco over it—knowing that a thing well begun is half ended. And yet certain Senators would have plunged the country into some decisive action upon this matter, before the proper data for a conclusion was before them. You need not be in so much of a hurry, gentlemen—the world has several centuries yet before it.

Outbreak in Italy.—Our readers will see, by the foreign news, that there has been an outbreak in Modena. At the time we write this, the particulars, extent and success of the rising are unknown. We have no faith in the *ultimate* success of any such movement. It seems to us to be merely giving fresh food to the fires of despotism.

☞ "Farming a Paying Business."—This is the title of an essay in one of our Agricultural exchanges. There would be no need of such an article in a city paper. Those of our wealthy citizens who dabble in fancy farming occasionally, find it a "paying business," and nothing else.

☞ A late account from Havana, says that Vice President King is very low indeed. "He has scarcely five pounds of flesh upon his body."

☞ The black dress coat is doomed. A ukase of his Imperial Highness, Napoleon III., has banished it from the *salons* of Paris—and as Paris gives the vogue to all the world, we may soon see it disappear from this Western hemisphere. Its successor is a blue velvet, single-breasted, standing collar, steel buttons, braided and gilt. The old black was a very superstanding garment—and as it would last indefinitely for parties, it was cheap—very cheap, compared with its more conspicuous successor. It has had a pretty long reign—surviving some half dozen French dynasties, and yet the Paris writers deplore its demise. They fear that the gentlemen, in adopting the style of glaring colors and decorated dress, will eclipse the ladies, or force them to resort to ruinous extravagance to maintain their superiority.

☞ A Party in Rome.—A letter from Rome says:—"Miss Cushman and five other ladies, including Grace Greenwood, Miss Hosmer, the young sculptress—a funny little fellow, bright, wide awake, and short as pie-crust—Miss Vaughan, Miss Hays, &c., are living together like the 'Happy Family,' in the Corso. Wicked wits call them the 'strong-minded party.' They have receptions every Wednesday evening."

☞ Wisconsin, with a sparse and emigrant population, has a school and university fund of $650,000, and an annual outlay for the instruction of her children of $120,000; $60,000 of her 120,000 children have attended school during the year. Many of the old States might take pattern after young Wisconsin.

☞ Rev. J. W. C. Pennington, D. D., a Fugitive Slave, was recently elected Moderator of the Third Presbytery of New York. This is the Presbytery of which the Rev. Dr. Cox, is a member.

☞ Uncle Tom's Cabin has been translated into the Russian, and is boring quite a run of popularity, although the translation is a poor one. A better one is in course of preparation.

New Publications.

The Organ of Corvan; A Tale of Expatriation and Restoration. By Baron D. E. N. Southworth. Author of "The Discarded Daughter," "The Forest Queen," "Ishmael," &c. This is considered by many whose opinion is worth having, the very best of Mrs. Southworth's absorbing and brilliant novels. The heroine, whose character is both strong and virtuous, fortified from the assaults of temptation by an immovable religious faith, and endearingly lovely from the womanly fervor and purity of her affections, interests our sympathies more perfectly than those mixed natures in which virtue and vice keep up a purgatorial struggle. The upright and wholly manliness conduct of Catherine through all the trials to which she is subjected, is a lesson to be profitably remembered; and the closing scenes, so touchingly described, which leave her in the enjoyment of the greatest happiness possible for her loving heart—a reconciliation with her husband, are perfectly satisfactory to the reader. We anticipate for "The Curse of Clifton" a very large circulation. Published by A. Hart, late Carey & Hart, Philadelphia.

Chambers' Repository of Instructive and Amusing Papers. The first volume of a series. Published by Gould & Lincoln, Boston; and for sale by Smith & English, Philada.

Hawthorne and his Marble Faun. Published by B. B. Mussey & Co., Boston; and for sale by T. B. Peterson, Philada. The author says this story was written before the "Uncle Tom" excitement, and is not designed to illustrate the blessings or the evils of slavery.

Castle Avon. By the author of "Ravenscliffe," "Mordaunt Hall," "Two Old Men's Tales," &c. Published by the Harpers, New York; and for sale by Lindsay & Blakiston, Philada.

Portraits of the Coltville Family. By the author of "Frank Fairleigh," "Lewis Arundel," &c. Published by H. Long & Brother, New York; and for sale by T. B. Peterson, Philada.

Ruth Garnett. By W. Harrison Ainsworth. Published by Dewitt & Davenport, New York; and for sale by A. Winch, Philada.

The Lofty and The Lowly; or, Good In All, and None All Good. By N. J. McIntosh, Author

SATURDAY
EVENING POST.

PHILADELPHIA:
SATURDAY, MARCH 5, 1853.

SATURDAY EVENING POST
STEAM-POWER BOOK AND JOB PRINTING OFFICE,
No. 66 SOUTH THIRD STREET, PHILA.,
Have Books, Pamphlets, Hand Bills, Way Bills, Circulars, Bill Heads, Cards, Labels, &c., &c., are printed with despatch, in the neatest manner, and on the most reasonable terms.
DELACOUR & PETERSON, Proprietors.

Congressional.

SENATE.

On the 21st, the Chair laid before the Senate a message from the President, in reply to a resolution calling for copies of applications made by British subjects for leave to fish off the coast of Florida. Referred and printed. Also, a reply by the Secretary of the Navy to the resolution calling for a copy of the report of the commander of the Brazilian fleet of 2 steam vessels.

Messrs. Walker, Gwin, Borland, Dodge, of Iowa, and Rusk, urged the consideration of the Homestead Bill.

Mr. Bell said he was sorry to see the Senator from Texas willing to give precedence to any measure over the Pacific Railroad Bill.

Mr. Rusk said he was for no Railroad Bill—there was one but it is dead.

Mr. Bell—I would like to know something of the Senator from Texas.

Mr. Rusk said that it was killed, disjointed and destroyed by the amendments of the Senate, and "none of mine."

Mr. Shields desired to reply to the Senator's charge made by the Senator from Texas. He had not destroyed, disjointed or killed the road, but he had destroyed the gentleman's project. If the bill passed, it now amended, it would secure the construction of a road, while the Senator's project never could have accomplished that end. He offered his amendment, because he was unwilling to have the $20,000,000 appropriated by the bill all expended in Texas and California, and none in the territories. He desired to enable the expenditure of the money to the territories where the land was worthless, instead of exhausting it in the States, where the land was equal to a land bounty. The bill will present land to the States, and if land is so valuable, these States could construct a road in their limits without taking any of the money, which would be so necessary for the road in the territories.

Mr. Dodge said that he desired that if this bill had passed, Mr. Ellis' ill health was attributable to his colleague's amendment. The bill as amended appropriated nearly the same amount of land and of money as it did before. The means in land and money had not been reduced. The only effect of his amendment was to limit the expenditure of the money to the part of the road in the territories. As a road, whether in the States or territories, was the same amendment, he thought, Congress would still give the same amount of money and land now could it be convinced that it was proper to apply the money to the territories lessen the ability to construct the road? The only difference would be to allow the contractors to receive more money per mile for that part of the road in the territories. It did not disgust him at all, for the original bill said the road should not be constructed through a State without the assent of the Legislature, which he thought unnecessary. The construction of the road in the States should be under the authority of the State Legislatures.

Mr. Pratt said he was in favor of the Southern route, and would have voted for the bill. This amendment would prevent the construction of the road through Texas or any State, and consequently, would be run by a Northern route. There were public lands in Texas, and now some of the money would be used for running the road through it. He could not vote for the bill.

Mr. Douglas said that the bill expressly provided that if at any point on the road there were not lands either side, the company might select lands elsewhere to the same amount. The amendment gives length to the bill.

After some further discussion, Mr. Rusk said that even if it were passed by the Senate, it would require a two thirds vote to reach it in the House.

Mr. Weller considered that the Homestead Bill. If it passed it would absorb all the lands in the States, and so put an end to all hopes of constructing a railroad by that means.

The debate was prolonged till after 1 o'clock, when the Senate proceeded to take up the Homestead Bill, and negatived—Yeas 23, nays 33, as follows:

Yeas—Messrs. Adams, Borland, Case, Chase, Dodge, of Wisconsin, Dodge, of Iowa, Hamlin, Hunter, Jones, of Iowa, Jones, of Tenn., Mallory, Pratt, Rusk, Sebastian, Seward, Shields, Sumner, Wade, Walker—23.

Nays—Messrs. Atchison, Badger, Bayard, Bell, Bradbury, Bright, Bradford, Brooke, Butler, Clarke, Cooper, Davis, Dawson, De Saussure, Dodge, of Ga., Fish, Foot, Gwin, Hamlin, Hunter, Mason, Moore, Miller, Morton, Morris, Pearce, Pratt, Sebastian, Shields, Soule, Toucey, Underwood, Weller—31.

The Pacific Railroad Bill was then taken up, and the vote adopting Mr Shields's amendment was reconsidered. The question then recurred on adopting it.

The question was then taken, and the amendment of Mr Shields was rejected—yeas 24, nays 26.

Mr Weller moved to amend the bill in the third section, by adding after the appropriation of twenty millions—"Provided, that no money in said act shall be expended exclusively in the construction of that portion of the road which runs within the territories of the United States."

Mr Case said this amendment, though proper in itself, did not remove the difficulty of having the United States appropriate $20,000,000 and control the construction of the road within the States.

Mr. Weller said he had provided for in the first section, which required the consent of the States.

Mr Borland said it was the same thing as Mr Shields' amendment. The question was then taken, and Mr Weller's amendment was agreed to.

Yeas—Messrs. Adams, Atchison, Bayard, Bradbury, Bright, Borland, Case, Clarke, Chase, Cooper, Dawson, De Saussure, Dodge, Dodge, Hamlin, Hamlin, Hunter, Mallory, Morris, Pearce, Pratt, Shields, Soule, Toucey, Walker, Weller—27.

Nays—Messrs. Bell, Borland, Brooke, Clarke, Davis, Dodge, of Wisconsin, Dodge, of Iowa, Foot, Fitzgerald, Gwin, Hale, Houston, Jones, of Iowa, Jones, of Tenn., Mason, Miller, Fish, Sebastian, Seward, Smith, Sprunce Sumner, Underwood, and Wade—26.

Mr Borland said, the adoption of the amendment extending the application of any part of the money to the road in the States, made this a sectional question, and it forever excluded the road from any of the Southern States.

Mr Mason said the amendments just adopted emasculated the whole bill, and its friends had better postpone the whole subject. He moved an adjournment, which was agreed to, and the Senate adjourned, leaving the bill sticking in the same old rut.

On the 21st, Mr. Gwin said that when the Army Appropriation Bill was taken up, he would move to fill up a clause making the Secretary of War Road to the Pacific Railroad Bill, providing for a survey and exploration of the route. As that bill had been so contributed greatly to killing the Railroad Bill, he would not object to his (Mr. Gwin's) taking his amender.

Mr. Davis reported a joint resolution ex ending till 1st of June next the time for complying with the act for the regulation of steamboats, in cases where the Inspector shall think such extension just and expedient; also, in cases where certain steamboats required to be inspected, shall be detained, Inspectors are to accept other life-boats as substitutes. And in cases of steamboats of the tonnage of less than thirty miles, the Inspector may authorize the dispensing of the requisite number of life-preservers, in lieu of life-boats. The object is to obviate difficulties in the manufacture of life-preservers and life-boats to be supplanted Inspector.

Mr. Hale said the benefits of this law had already been manifested. This time last year accidents on steamboats had occurred, by which 1000 persons had been hurried into eternity. No such accident had occurred this year. This gratifying result was produced by the care and attention necessary for a compliance with this law. The life-boats required by the law could be obtained if the steamboat owners desired to do so.

Mr. Hamlin considered that there was no difficulty in complying with the law, if owners thought proper to do so.

Mr Pearce thought the time ought to be extended longer.

Mr. Davis said the steamboat owners desired to have it postponed till next year, that they might review their efforts for its repeal.

Mr Borland said the question was one between the preservation of the lives of men, women and children, and the cupidity, avarice and recklessness of steamboat owners. He thought there were quite a number of serious accidents occurring on these excursion boats, and the suspension of the law, as it recommended to them, be deplored.

Mr. Borland moved to strike out the provision allowing steamboats now authorizing and emp-wering any Judge of a United States Court to administer to W. S. King the oath of office, at any place in the United States, on the said 4th of March, or any day thereafter.

Mr. Butler said that as soon as Mr. King was advised of this bill, he would repair to Havana or key West, and take the oath. Passed unanimously.

On the 24 h, the Army Appropriation Bill was then taken up.

Mr. Chase, by direction of the Committee on Roads and Canals, reported a bill additional sections, appropriating $150,000 for a survey and exploration of the routes to the Pacific by the United States Engineers, with a view to the selection of the best route for a railroad to the Pacific; the said surveys to be laid before Congress as soon as completed, with such maps and profiles as may be considering that road as may be laid before them.

Mr Chase supported the amendment, as the best and most practicable proceeding, to have speedily and satisfactorily a railroad authorized and constructed to the Pacific.

After a long discussion, and the voting down of several amendments, the bill was postponed.

Mr Charlton presented the credentials of Mr. Toombs, Senator elect from Georgia, for six years from the 4th of March next. Adjourned.

On the 25th, the Army Appropriation Bill was taken up, the question pending was on Mr. Walker's amendment granting for a survey and location by the direction of the President, of a railroad to the Pacific, and appropriation of land in twelve townships, on each side of the said road, to be given to actual settlers, free of charge, the remaining sections to be held by the United States, the proceeds of which to be applied to the construction of the road. Rejected. Yeas, 17; nays 36.

Mr. Chase's amendment, providing for the survey of a railroad route to the Pacific, was then adopted. Yeas, 31; nays, 16.

Mr. Dawson moved an amendment, for the opening of an emigrant road to California and Oregon, with posts along it, at each of which twenty men are to be stationed to keep the road and bridges in order, and attend to the ferries. Adopted. Yeas, 25; nays, 21.

The Commissioners were authorized to purchase the Blue Lick Springs, the spot selected as the site for the Military Asylum. Subsequently, the site was stricken out, leaving the Commissioners to purchase wherever site they saw fit.

The section placing the Armories under the care of civil superintendents was negatived. A motion to reconsider was made and carried, by a vote of 29 to 22. After a long debate upon this question, Mr Douglass raised as a point of order, that in recording the vote and nays, the name of Senator Bright had been omitted from the nays.

The Speaker decided that the vote should be again taken, pending which the Senate adjourned.

On the 26 h, a communication was received from Mr. Kennedy, Superintending Clerk of the Census, asking an investigation of his conduct. Referred.

Mr. Hunter reported the Civil and Diplomatic Appropriation Bill, with amendments. The provision that the Armories shall be placed under the charge of civil superintendents was stricken out, 29 to 24. $20,000 was added to defray the expenses of the Turkish steam-frigate during her visit to the Fair in New York, and $70,000 to estimate the Mexican Boundary. The bill was then postponed, and four private bills were passed. Adjourned.

HOUSE OF REPRESENTATIVES.

On the 21st, the House took up the Civil and Diplomatic Appropriation Bill, to set on the amendments reported from the Committee of the Whole on the State of the Union. Upwards of seventy of them were concurred in en masse.

The following amendments were concurred in by separate votes and nay votes—$30,000 appropriated to enable the Directors of the Washington infirmary to enlarge their accommodations for sick transient paupers; $115,000 appropriated for the Custom House at St. Louis; $67,745 for the Custom House at Louisville; same amount for the Custom House at Cincinnati; and $324,000 for continuing the construction of the Custom House at New Orleans.

The House, by a vote of yeas 94, nays 80, concurred in the amendment appropriating $18,000 for the salary and outfit of a minister to Central America, to be accredited to such one or more of the governments included in that name, as the President of the United States may designate.

The House non-concurred in the amendment increasing the appropriation for the annual repairs of the President's House from $6,000 to $10,000, but concurred in that appropriating $25,000 for new furniture for the President's House.

The House refused to suspend the rules for the purpose of taking up the Senate bill to re-organize the navy.

After the passage of two private bills, adjourned.

On the 22d, the House resumed the consideration of the bill establishing reciprocal trade with the British Provinces, on certain conditions. It was discussed by Messrs. Fuller, Sabine, and Tuck.

The House went into Committee of the Whole on the State of the Union, upon the Indian Appropriation Bill. After discussion, in the course of which Mr. Giddings occupied the floor in reply to a letter sent into his district last fall by Elisha Whittlesey, Comptroller of the Treasury, charging him with having overcharged mileage. Adjourned.

General News.

FOREIGN NEWS.—The Parliament re-opened on the 16th ult., with the usual ceremonies. Lord John Russell made the Ministerial statement, which was that the estimates for the year would be the first business. The estimates to be voted for the navy, army and ordnance would be a considerable increase upon last year. They would also introduce a bill to enable the legislature of Canada to dispose of the clergy reserves. The ministry could also move for a commission on Jewish disabilities. They would also persist in abolishing penal settlements in Australia. The Budget would not be brought in before the Easter recess.

The most important news is that of the breaking out of an insurrection in Milan, Italy. Some accounts say it was soon suppressed, others deny this. We must wait for further advices. Proclamations purporting to be from Mazzini and Kossuth were posted up—the latter, probably a forged one, was addressed to the Hungarian soldiers in the Austrian Italian Army.

The insurrection in Milan has been made the pretext for assembling an immense body of Austrian troops near the frontier, and the state of Europe altogether is deemed far from satisfactory. There is serious disquietude in Germany, and the condition of the East also furnishes serious apprehensions for the future.

The insurrection in Milan has created immense sensation in Paris. The Chronicle's correspondent says, "Great apprehensions are entertained that it is only the commencement of further and much more serious events. No doubt Mazzini is at the head of the movement; he has been at Tessino for the last month. There was a good deal of previous agitation to excite the people and prepare them for the movement. On the 24 a rumor was circulated that Louis Napoleon had been assassinated. It created a panic, and the government was obliged to issue placards denying the truth of the report."

According to hints dropped a simultaneous rising in other parts of Lombardy may be looked for. It was stated on the Bourse that two additional regiments had been ordered to embark at Toulon for Civita Vecchia, to insure tranquility in the Roman states.

If we may credit the statement of the courier from Milan, just arrived at Lugano, a band of 600 men, armed with poignards, had, on Sunday last, encountered the troops and gen d'armerie. More than 300 perished in the conflict. The same news had occurred at Rimini, but the result is unknown.

The Paris *Moniteur* contains a long review of, with copious extracts from Mr. Cobden's recent pamphlet, and also the correspondence with Gen. Bretlinton on the apprehensions of French invasion. The writer maintains that the views taken by Mr. Cobden are substantially correct, and joins him in adjuring the ministers of religion, and all who value the peace of the world, to combat the warlike propensities of the English people, and to preach good will, peace and charity.

It is reported that the Emperor intends to settle a pension of 400,000f. a year upon the Countess of Montijo, and an annuity of 600,000f. upon the Empress for her toilette.

The official journal, in publishing in a conspicuous manner the article from the Pays relative to the arrests of suspected correspondents, declares the intention of the government to tolerate no longer the system of misrepresentation and abuse which dishonor a part of the foreign press.

From Hungary the accounts concur in stating that the Austrian Government is in continual fear of fresh insurrections, and that it is uncertain at any moment when a popular outbreak may occur.

A proclamation, dated Dec. 20, says that now and for the future, the province of Pegu will form a part of the Eastern British territory.

The treaty for the annexation of Pegu, dated December 20th, concludes with the intimation that in case the Burmese Emperor should refuse to make an immediate peace, or should molest our new territory, the whole empire will be subdued, and the Emperor dethroned.

The Burmese, however, make no sign of acceding to this proposition, and an advance on Ava was considered inevitable.

GOVERNORS OF NEW-MEXICO.—What sort of a sinecure the berth of Governor of Mexico is, may be guessed at from the following statement in a letter from Santa Fe:

By the way, for fear that any of your friends in Ohio might become ambitious, and wish to fill Governor Lane's shoes, let me give them a little information that may be useful to them. The history of the civil Governors in New Mexico reads thus: Colonel Perez was sent out from the City of Mexico, as Governor of that Territory, in 1857. From some trifling cause, the people succeeded in raising a Revolution, the Pueblos Indians joining in with them. The Governor was caught and put to death; his body was stripped and shockingly mangled; his head was carried as a trophy to the camp of the soldiers, and made a football of.

The Secretary of State, Jesus Maria Alarid called El Chico, was taken, stripped and scourged, and his body pierced through and through with lances.

Don Santiago Arven, another Governor, was butchered in a still more barbarous manner.—His hands were cut off; his eyes and tongue were pulled out, and shaken taunt ingly in his face, and in this most cruel manner he was murdered.

Jose Gonzales was declared Governor soon after. Our friend, General Armijo, declared against him, raised a force, defeated him at La Cana, took him prisoner, and, without even the form of a trial, shot him down on the spot. Armijo took the reigns of Government into his own hands, and held them until General Kearney drove him out of the country in 1846.

Governor Bent, who was appointed by General Kearney, had had been in office a month, when he was dragged from his house in Taos, at midnight, and murdered by the Mexicans and Pueblos Indians before his own door in the Plaza.

Governor Calhoun, the next Governor, worn out by the cares and anxieties of his office, died on his way home to the States last summer.

What is to be the fate of Governor Lane remains to be seen. General Pierce will probably get his head, if nobody else gets it before him.

TRIAL OF THE SPIRITUALISTS AT CHICAGO.—The County Court was occupied yesterday in the trial of two of the parties—Messrs. Pilgrim and Arnold—connected with the band of Seth Paine, on an indictment for inciting to riot.—The following is a portion of the testimony of Mrs. Herrick, one of the mediums: "Had been in Chicago some months; had been employed in the Bank to take money and pay it out; gave advice to Mr. Paine to open the Bank on Tuesday, and let one person in at a time; this advice was given by the spirit of George Washington; did not know of any other communications; might have received one from Henry Clay; does not know who got a communication about the smashing; Henry Clay's spirit told them to receive all the bills and redeem them; received communications three or four times a week; a rule of the Bank was not to redeem money for any person who came in smiling; did not know of any revelation not to redeem money for dishonest persons." The jury in the case were out all night, and Cagen Court this morning—could not agree, and were discharged.—*Chicago Jour. 16th.*

COPPER MINING SPECULATION.—The following story of a copper mine speculation in North Carolina, is told by the Fayetteville Observer. We shall probably soon hear of a new Company "launched" on this $6,000 purchase.

The New York firm bought a copper mine in Guilford County, a few days ago. We have heard so amusing (and true) account of the bargaining for it. The old gentleman who owned it was asked what he would take "Fifteen hundred dollars," he replied. "Very well, I'll take it," replied the applicant.—"Well, I don't think I can sell it for less than $2,000," said the old gentleman. "I'll give it," "But I believe I must have $2,000." "I'll give that." So the old gentleman went on until the purchaser passed at $6,000, at which price the papers were signed—the whole operation occupying less than one hour. The next day another company offered the old gentleman $7,000, who concluded that he did not exactly know what he was about when he sold at so low a price.

LIABILITY FOR COUNTERFEIT BILLS.—The system adopted by the Suffolk Bank, of Boston, of marking all counterfeit bills that pass through the foreign money department of that institution, operates as a great check to the passage of bad money in our city. When once a bill is marked, the person from whom it was received is liable, and most either redeem it or inform to whom it was returned. Attempts have been made to erase the Suffolk mark, but the officers now put it both on the face and back of the bill, in such a way as to render any removal impossible. The benefits of the system are every day felt. No longer ago than yesterday a man presented a counterfeit bill at our counter, which had the mark upon it. He did not know where he received it, and going to the Suffolk Bank, ascertained there that it was money deposited in July, 1850, by a trader of this city.—The bill was taken to this trader and redeemed.—*Boston Traveller.*

INTERESTING EXPERIMENT.—A very interesting experiment was tried at Chicago, a few days ago, to ascertain the amount of oxygen necessary to support life. Six hundred persons were placed in a hall in one of the hotels, all the doors and windows were closed and the experiment began. During the first half-hour nothing special was observed except a sensible drowsiness, which was warded off as long as possible by an ingenious device of the experimenter in the shape of an eloquent lecture. During the second half-hour several sank into a deep sleep, from which it was impossible to rouse them, and a few fainted. At the end of the third half-hour, it was deemed unsafe to continue the experiment longer, and the fact was considered established, that under those circumstances life would not become extinct within the space of 35 minutes.—*Ex. Paper.*

A REQUISITION.—Governor Bigler, on Thursday week, the West Chester Village Record says, despatched a requisition upon the Governor of Maryland, for McCreary, the kidnapper of the Parker gang. The Grand Jury of Chester County had previously found a bill of indictment against him for the offence. This is the second or third time a requisition has been made by the Governor of Pennsylvania, for this individual, but heretofore he has not been delivered up.

DISSOLVING THE UNION.—Reese E. Price, a resident of Cincinnati, who is possessed of considerable of the world's goods, has made a proposition to the Legislature of Ohio, for a dissolution of his partnership with the State. He considers the notions of the Commonwealth antagonistic to those entertained by himself, and does not desire fellowship with it. He proposes to pay his portion of the State debt, which he estimates at $500, and be absolved from all obligations.

POLITICAL NEWS.

A NEW TREATY.—The Union is severe upon the Whig works in the various Departments, who have sold out their offices to Democrats, and says the purchasers will not be permitted to retain their bought places by the incoming administration. The prices at which clerkships are held here may not be unintersting to applicants. An active Whig who was receiving a salary of $1,200, sold out his office for $600. Another clerk, receiving $1,600, holds his berth at a $600 a year. The market is well stocked and sales are quick.

GOOD TO EXPORT.—Ex-President Van Buren, it is said, will start for Europe this month. He will accompany his son, Martin Van Buren, Jr., whose impaired health, it is thought, will be benefitted by the European tour. Mr. Van Buren, himself, retains all his vigor of mind and body, and his constitutional cheerfulness. The Ex-President will be the only one of the Chief Magistrates of the Republic, we believe, that ever visited Europe after his retirement from office.

CAPITAL PUNISHMENT IN ILLINOIS.—A bill in the Illinois House of Representatives, to abolish capital punishment, was defeated, on the 9th ult., by one vote. Next day the bill was reconsidered, and the bill amended so as to make the penalty merely imprisonment for life. The question then recurring on its passage, it was again defeated by a vote of 27 ayes to 41 nays.

THE TEHUANTEPEC CONTRACT.—The following are the terms of the Tehuantepec Contract, furnished by the Mexican Minister, and sent by Mr. Sloo. Mr. Sloo is to hold the road for 50 years, and agrees to finish it in 7 years. The Mexican Government grants the exclusive navigation of the Hasasacalco River, and receives $600,000 as a loan, to be re-paid out of 20 per cent. of the net profits, half of which draws interest of 6 per cent.

Generals Morey, Villamil, Bonifaco and Gutiere, have been appointed commissioners to deliver the road over to Mr. Sloo. They left Mexico on the 12th ult.

THE JERRY RESCUE TRIALS.—The issue of the "Jerry Rescue" trials, which have just been concluded at Albany, in which the four persons placed on trial, for having participated in the Jerry rescue: Enoch Reed, colored, was convicted under the law of 1793; William H. Landon, for resistance to the Fugitive Law of 1850, acquitted; Ira H. Cobb, do., jury disagreed; John B. Brigham, for the same, with a like result.

UPROORED.—The report that George M. Dallas was to be in the new Cabinet.

THE ORDER.—It is said that the Union is to have Hiester's organ: to be edited by J. W. Harney, of the Louisville Democrat.

NEW YORK FREE DEMOCRATIC STATE CONVENTION.—This Convention was held at Syracuse, on the 22nd ult.

The resolutions declare that no civil government but piracy upholds slavery—denounce slavery—in favor of restoring national land holding—go for no North, no South—no white, no black—no male and no female. They rejoice that the steady hand of Providence is shaking the Fugitive Slave Law, and as to the trial of Enoch Reed, the judicial proceedings are denounced as so disgraceful and mean as to excite the deep scorn of the world, and the deeper shame of the American nation. They call upon reformers should henceforth, on trial, neither decry the charge, nor disclaim the honor, but simply hold the court and jury responsible for their cowardice, inhumanity, and defying God, by punishing as crimes deeds of justice and mercy. A general acquiescence in such a legal outrage on the part of the friends of freedom, in the subject of slavery the people were deeply corrupted.

The Convention was addressed by Gerritt Smith, Lucy Stone, Antoinette Brown and Frederick Douglass.

F. Douglass said—White men had usurped the negroes' inalienable rights for ages. Negroes must now learn trades, and be useful, or lawmakers will not regard them. The prejudices of the whites were against the negroes acquiring property. Gerritt Smith had remarked that they should conquer such prejudice.

Gerritt Smith said, the course pursued by Judge Hall in Albany, on the rescue trials, surpassed in outrage anything in the conduct of the infamous Jeffries. He quoted the words of Mr. Waggoner, one of the jurors on the trial of Cobb, who said he was willing to hang Cobb to get at the verdict of conviction, and avowed that it was caused by physical exhaustion. Gerritt Smith said he was glad of the Albany verdict; but would have been more gratified had the accused boldly avowed their agency in the Jerry rescue. He and the Rev. Mr. May were the only persons who had been useful to them. The history of the civil Governors in New Mexico reads thus: Colonel Perez was sent out from the City of Mexico, as Governor of that Territory, in 1857. From some trifling cause, the people succeeded in raising a Revolution, the Pueblos Indians joining in with them. The Governor was caught and put to death; his body was stripped and shockingly mangled; his head was carried as a trophy to the camp of the soldiers, and made a football of.

The Secretary of State, Jesus Maria Alarid called El Chico, was taken, stripped and scourged, and his body pierced through and through with lances.

Don Santiago Arven, another Governor, was butchered in a still more barbarous manner.—His hands were cut off; his eyes and tongue were pulled out, and shaken tauntingly in his face, and in this most cruel manner he was murdered.

Jose Gonzales was declared Governor soon after. Our friend, General Armijo, declared against him, raised a force, defeated him at La Cana, took him prisoner, and, without even the form of a trial, shot him dead on the spot. Armijo took the reigns of Government into his own hands, and held them until General Kearney drove him out of the country in 1846.

Governor Bent, who was appointed by General Kearney, had had been in office a month, when he was dragged from his house in Taos, at midnight, and murdered by the Mexicans and Pueblos Indians before his own door in the Plaza.

Governor Calhoun, the next Governor, worn out by the cares and anxieties of his office, died on his way home to the States last summer.

What is to be the fate of Governor Lane remains to be seen. General Pierce will probably get his head, if nobody else gets it before him.

Goez.—*Wright's Indian Vegetable Pills*, are a certain cure for this painful malady; because they purge from the body those morbid humors, which are the causes and seat of Gout and Rheumatism, but of every other and pain too rather. From four to eight of *said Indian Vegetable Pills* taken every night on going to bed, or if the pain is severe, tight and drawing, will in a short time make a perfect cure of the worst violent attack, either of Rheumatism or Gout, at the same time the blood and other fluids will be so completely purified, that pain of every description will be literally driven from the body.

Beware of Counterfeits!—The genuine will be for sale by agents and dealers in all parts of the United States and Canadas.

Principal Office 169 Race Street, Philadelphia.

Marriages.

☞ Marriage notices must always be accompanied by a responsible name.

At Gloucester City, on the 24th ult. by the Rev. A. Atkinson, Mr. Charles A. Crawford, to Miss Lydia Ann Russell, all of Upper Darby, Pa.

At the same place, by the same, on the 27th ultimo, Mr. James Gibbs, to Miss Sarah E. Kent.

On the 13th ultimo, by the Rev. Jos. H. Kennard, Mr. George S. Douglass, to Miss Mary H. Lynton, both of this city.

On the 14th ult. by the same, Mr. Cornelius B. Kinney, to Miss Margaret S. Winters, both of this city.

On the 17th ult. by the same, Mr. Isaac Jordan, to Miss Mary H. Young, both of Chester county.

On the 17th ult. by the same, Mr. Joseph Yeakle, to Miss Mary Hunton, both of Montgomery county.

On the 17th ult. by the Rev. A. Barnet, Andrew S. Tomlinson, to Elizabeth Kirkpatrick.

On the 19th ultimo, by the Rev. S. R. Lesley, Mr. Joseph W. Prince, of New Castle county, Del. to Miss Sarah A. Ember, of Philadelphia.

On the 19th ult. by the Rev. Dr. J. P. Berg, Mr. Francis S. Bacon, to Miss Annie, daughter of M. Ferman, Esq. all of this city.

On the 21st ult. by the Rev. D. Gaston, Mr. James Paul, Jr. to Miss Maria Jones, both of Kensington.

On the 22d ult. by the Rev. John Chambers, Mr. John Cooper, to Miss Caroline Foulke, both of New Castle county, Del.

On the 24th ultimo, by the Rev. Thos. Allen, Mr. William A. Cooper, to Miss Harriet F. Quinell, all of Philadelphia.

On the 24th ult. by the Rev. Geo. Chandler, Mr. Emanuel Dull, to Miss Sarah A. Souton.

On the 26th ult. by the Rev. Wm. L. Gray, Mr. Davis Minster, to Miss Maria J. Meure, both of Philadelphia.

On the 19th ultimo, by the Rev. S. Remington, Mr. Jonathan Ashton, to Miss Mary E. Nelson, both of Philadelphia.

On the 19th ult. by John G. Wilson, T. D. M., Mr. Aquilla Colton, to Miss Elizabeth Ann Colton.

On the 17th ult. in Pemberton, N. J. by the Rev. B. Wood, Mr. John H. Roberts, of this city, to Miss Mary E. daughter of Charles Budine, of the former place.

Deaths.

☞ Notices of Deaths must always be accompanied by a responsible name.

Feb. 19, 1853, Mrs. S. Ferguson, wife of R. Ferguson, of Newark, Del.

On the 21st ult. Mrs. Sarah Ann, daughter of Saml. W. Barber, late of this city, aged 3 years.

On the 21st ult. Edward, son of Rich. Cheesbman, aged 1 year.

On the 21st ult. Lieut. George W. Chapman, U. S. Navy.

On the 21st ult. Mrs. Margaret Turner.

On the 22d ult. Joseph, son of James and Esther Ward, aged 1 year.

On the 22d ult. Bridget, wife of Dennis Duffy, aged 34 years.

On the 23d ult. Mrs. Mary Weaver, aged 38.

On the 21st ult. Hoen, wife of Timothy Connelly, aged 19 years.

On the 22d ult. Sarah L. De Young, aged 40 days.

On the 21st ult. Miss Ellen Allen, aged 21 years.

On the 22d ult. George Bowles, aged 7 years.

On the 23d ult. Mrs. Mary A. Smith, aged 33.

On the 23d ult. Mary D. Wilkinson, aged 42.

On the 23d ult. Emma Louisa, daughter of Robert M. and Emma Patterson, aged 1 year.

On the 23d ult. Mrs. Sarah Weir, aged 54 years.

On the 23d ult. Virginia, daughter of Wm. and Fanny Mills, aged 16 months.

On the 22d ult. Mr. Benjamin F. Gilbert, aged 26 years.

On the 23d ultimo, Amanda, daughter of Henry and Emma Newkirk, aged 1 year.

On the 21st ult. Sarah Elizabeth, daughter of Peter and Elizabeth Tyson, aged 5 years.

On the 21st ult. George W. Campbell, adopted son of Chas. Smith, aged 4 years.

On the 21st ult. Mrs. Ellen McGranahan, aged 68 years.

On the 20th ult. Mary T. daughter of the late Daniel Boyle, aged 20 years.

On the 20th ult. Mrs. Margaret McGarvey, aged 75 years.

On the 21st ult. Sarah Anna, daughter of Richard and Eliza Fleming, aged 8 years.

On the 21st ult. Mrs. Mary Campbell, aged 54.

On the 22d ult. Mrs. Catharine, wife of William Hodgson.

Selected Poetry.

THE REAPER.

BY ELIZA COOK.

I love, I love to see
Bright coral gleam through the tide;
'Tis a goodly sight—but it must be
In the reaper's strong hand

The helmet and the spear
Are turned with loud wrench;
But the display is over with the orphan's tear,
And the blood-spot cool beneath.

I love to see the field
That is meet with people stale;
But not where buffet, sword and shield,
Lie strewn with grey plate.

No, no; 'tis when the one
Minute drives his cloudless beam,
Till the rich and bounteous grain—drop-dropping run
On the vineyard south it stream

My glowing heart begin high
At the sight of shining gold;
But it is not that which the miser's eye
Delighteth to behold.

A brighter wealth by far
Than the dusty miser's yellow ware
Is seen around, in the fair hills crowned
With sheaves of burnished grain.

Look forth, yet toiling man;
Though little ye possess,
Be glad that death is not on earth,
To leave that little less.

Let the song of praise be poured,
In gratitude and joy,
By the rich man with his garners stored,
And the ragged gleaner boy.

The foast that warfare gives
Is not for one alone—
'Tis shared by the meanest slave that lives,
And the lowest of a throne.

Then glory to the steel
That shines in the reaper's hand;
And thanks to God, who hath blessed the soil
And crowns the harvest land!

Selected Sketch.

RUSSIAN JUSTICE.

There is much analogy in Russia between the administration of justice and that of the police. Most of the Russian laws are excellent; unfortunately the intentions of the law-givers are but too often neutralized by the conduct of those appointed to administer them. It is evident that in every country the right working of the laws depends entirely on their administrators, and here is the weak point where Russia's imperfections of civilization are most plainly manifested. The administration of justice is also rendered doubly difficult by the circumstance that the whole Russian legal code consists of a mass of ukases, which, in the progress of centuries, has accumed such enormous proportions, that hundredfoot wagons would hardly suffice to transport it. Amongst these ukases are naturally found many which contradict each other. And (especially of late years) a new ukase has not always contained a clause expressly annulling those in a contrary sense, and of earlier date. Hence the most important branch of Russian jurisprudence became a knowledge of all those numerous ukases, since the production of one of remote date often caused the decision of a tribunal to be unfavorably opposed to what it would have been according to the decrees more generally known and commonly acted upon. The Emperor Nicholas, discovering this great evil, appointed, immediately after he ascended the throne, a special commission of revision, whose task it was to sort all these ukases chaos, to arrange them and bring them into harmony with each other, and finally, out of the heterogeneous and discordant mass, to form one appropriate and harmonious code of laws. The work was completed several years ago, and the result was more than twenty folio volumes. A second commission was then appointed, and has ever since been toiling to reduce these compendious forms to dimensions more compact and practically useful. Thus, step by step, advancing, Russia may hope, in due time, to possess a regular code, remedying the evils and supplying the wants that the country so long has felt.

Yet, even in their present state, the Russian laws are not only adapted to the spirit and character of the people, but are also, for the most part, humane, far more so than accords with popular notions of Russia. Justice is cheap, and fees enlist not. Stamps accepted, a lawsuit may be carried through, and decided, without costing a kopeck to either of the parties concerned. So the law ordains. But how is this carried out? At the very first step taken by the plaintiff in a cause, the clerk or secretary finds that the paper handed in is totally incorrect in its form, and politely requests that it may be drawn up a second time in a more regular manner. This is neither more nor less than an indirect demand for twenty rubles bance.—The uninitiated in such matters, who finds his petition (in Russia everything is a "petition,") perfectly regular, and insists upon its reception, may rest assured that it will be duly shelved, and so remain; on the other hand, persons initiated in the mysteries of Russian justice, rectify the imperfections of their "petition," by handing in their twenty rubles, by virtue of which they may rest assured that no exception will be taken to its form, and that their suit will be admitted on the spot. But it unfortunately happens that the smallest breaks necessitates some twenty or more such "petitions," each one of which must be weighted with the stimulative *douceur* of twenty rubles, so that, although exempt from legal charges, the gainer of a suit often finds himself out of pocket to twice the amount he has recovered. Whether or not the Russian officials adopt this modes proceeding with friendly and highly moral view of disgusting people of lawsuits, and of induciing them to resort as much as possible to amicable compromise, there can be no doubt that that is the end they attain.

It is a proverb in Russia, that "every man gets his rights—who lives long enough," and the fact is, that it is often less difficult to establish one's right, than to obtain its official recognition. Then it happened that a certain person had duly won his lawsuit, but his utmost endeavors were insufficient to get possession of the judgment. At last he had recourse to stratagem. He went to the magistrate who had had the decision of his affair, exposed to him the nature of his solicitation, and after hearing, in reply, an exposition of the numerous difficulties which opposed themselves to the fulfilment of his wish, the pressure of business, etc., he took out his pocket-book and extracted from it a packet of bank-notes, which he tore in half. One of the halves he handed to the man of law, and replaced the other in his pocket. "These halves," he said, "are valueless apart, and useless to both of us. I consider either as lost; it depends upon yourself to restore their full value to those in your possession." On the uptrown, this ingenious person had a call from a very friendly and gentlemanly man, who made him the benevolent offer to exchange the much-desired judgment, which he had with him, duly and legally drawn up, against the valueless halves of the bank-note.

As a striking example of the singular action of the "responsibility" system upon the minds and moral perceptions even of upright and highly respectable men, and of the manner in which, upon occasion, they are found to limit their views to the material advantage of the State, even at the cost of private individuals, I take an anecdote of the official life of Czaritz, the famous Minister of Finance. One branch of his spies—to branch of the Russian administration is without them—brought him intelligence that a receiver-general of the revenue had misappropriated large sums of money. In most countries, the natural consequence of such a denunciation would be an immediate investigation of the accused person's accounts. Czaritz did nothing of the sort. He went into his office, and called out aloud to a secretary, who sat at the further end of the hall, "to give notice to those officials whom it concerned, that upon that day week there would be a general inspection of all the public money-chests in the metropolis." Of course the defaulter was informed of this within the hour. Off he ran to Jews and Turks, and borrowed for a few days the amount of his defalcation. The week elapsed, and the inspection began. The Finance Minister himself came to the accused person; his books were checked, and the balance they exhibited was compared with the state of the strongbox. Thanks to his money-lending friends, the amount delinquent to a kopeck. With a self-pleased glance, Czaritz had the money restored to its iron coffer, locked it with his own hand, and—put the key into his pocket.

An hour afterwards, the receiver general received his discharge. Thus he escaped Siberia, his place was abolished, and several important persons—perhaps honest men, who had been sacrificed to justice and serve him—were defrauded of their money. But the State lost nothing, and the Minister saved his "responsibility." Thus are the laws eroded in Russia, but not in all cases with as much apparent levity.

The humanity of Russian legislation has long since abolished capital punishment, with the sole exception of cases of high treason. Even after the great military conspiracy of 1825, only seven of the chief traitors for their crime were slain; twenty a small number of circumstances for a plot whose ramifications were so extensive. The knout, which replaces capital punishment, is certainly a terrible infliction; but here also do the widely-spread popular notions on the subject demand rectification. With an "Russia" and "knout" have become such identified terms, that one is inclined to believe that the slightest infliction of the lash may bring the most honest of men under the frightful thong, which every police subaltern is supposed to be at liberty to inflict by the warrant of his own will. The fact is, that in Russia a criminal can be sentenced to the knout for no other offences but those which in Germany would be punished by death, and such sentence has never emanated without an authorization from the Emperor himself, signed with his own hand. The number of blows seldom exceed six; it is certainly a fact that the first often suffice to kill a man; nevertheless, instances have been known where criminals received ten, and yet survived to make a long statement of their fault by labor in the Siberian mines. The most frightful circumstance relating to the knout, and that upon which its mournful celebrity is doubtless founded, is the abuse that was formerly made of it. As recently as in the time of the Emperor Paul, the sentence to punishment by this fearful instrument often emanated purely and directly from the sovereign's arbitrary will. By such order and authority was a Pope, who kept a reading club, condemned to the knout, and to imprisonment for life to Siberia, for having circulated a prohibited book. Thus also did the sense of justice (coupled with extreme severity) of that Czar pronounce an equally terrible sentence upon the person guilty of a certain offence which had been committed in the garrison. The affair was of a delicate nature, and very probably had reached the ears of the Czar in a distorted form. Meanwhile, in his first anger, he had pledged his word for the carrying out of the penalty, and had named a committee of investigation, whose researches it would have been difficult, indeed impossible, for the real culprit to escape. To avert the horrible misfortune that must have ensued, a non-commissioned officer of the Preobrazensky grenadiers generously sacrificed himself for his young chief, and gave himself up as the guilty person. The committee, who already had their misgivings, felt themselves relieved from an oppressive burden and responsibility. Examination and execution were accelerated to the utmost; influential intervention converted the corporal punishment into a mere ghastly mockery, and the devoted grenadier departed for Siberia, where he lived in abundance, until a cabinet-courier, despatched by a new Emperor, recalled him to receive his reward. The signature of his recall is said to have been the very first act of the young Czar.

Such arbitrary sentences are no longer passed, and the present Emperor might be blamed rather for his too great lenity, than for his severity. To this day, as regards the bureaucracy, the celebrated "dubina" of Peter the Great would frequently find very appropriate employment. It is undeniable that justice and police are the *parvis hominum*, the shame and scandal of the Russian Empire. The Emperor, who knows everything, but who cannot remedy everything, does his utmost to abate the evil, and made an important step toward abolishing the most crying abuses, by the appointment, some seven years ago, of the excellent Perowsky to the post of Minister of the Interior. Yet it is a question whether even this man of rare ability will succeed in opposing an effectual and permanent barrier to the flood of official corruption. Admirably qualified though he be for his August task, it may still be doubted whether he will escape the countless intrigues and cabals organized against him by the thousand-headed monster he has to combat, and which he threatens in its innermost intrenchments. In the army of officials he finds his bitterest enemies, against whose malice he is upheld only by the Emperor's *faveur*, and by the hearty good wishes of the people, who adore him, and who see their great gain in his steadfast exertions.

To prove the administration of the police what visual officers were to be found in its ranks, the Minister of the Interior once sent for its chief, and communicated to him information he had received, that every night, in a particular house, prohibited games of chance were played. He asked for two of the most trustworthy officers, and sent them at night to the house in question. It was surrounded, and the two agents went up stairs to the apartment that had been indicated to them. There they found a party of six or eight gentlemen, seated at a round table, in the full enjoyment of a game at *faro*, and with heaps of gold before them. Caught *in flagrante*, the disconcerted gamblers were about to be conveyed to the guard-house, when one of them managed to make the two police tyrants understand that *l'argent*," which they had just been playing, was a very harmless amusement; that the pile of gold upon the table was no evidence against them; that they were in the habit of playing this game—which was one of skill, not of chance—for very high sums; and, to prove this assertion, he offered to play a game at *ecarte* with each of the police agents, at one thousand rubles a game. The agents accepted the offer, as well as the one thousand rubles, took themselves off, and next morning the chief of the district reported to the minister, that the visit to the suspected house had produced no other result than the discovery of a party of gentlemen harmlessly amusing themselves with a friendly game at cards. Perowsky sent for the two police agents, heard their report from their mouths, and then, turning to their chief, who was present,—"Learn," he said, "what dependence you can place on the men whom you confide, and who should be the guardians of the public welfare." And, opening a side-door, he disclosed to the astonished officials the gamblers of the night before, sitting round a green table, in the same order, and engaged in the same prohibited game. Disguised, and with a long false beard, Perowsky went about to shops and stalls, purchasing sugar, meat and butter, and checking the weight of his purchases. Many shops were closed, but the housewives of St. Petersburg rejoiced at the augmentation of weight and measure.—*Pictures of St. Petersburg.*

OLD TIMES.

Rev. Dr. Whiton, of Antrim, N. H., has recently given a historical sketch of that town, from which we draw the following passage:

"Our ancestors' farming utensils were clumsy; their clothing homespun and coarse, but durable; the men wore tow shirts, striped woollen frocks, and leather aprons. The best suit of coarse woollen cloth was reserved for Sabbaths and special occasions, and lasted year after year. In winter they wore shoes, excluding the snow by a pair of woollen leggins, fastened over the mouth of the shoe by strings. Boots were rare; great coats and surtouts rare still. A pair of boots would last a man many years. In summer neither men nor women wore shoes at home; on the Sabbath the women often carried their shoes in their hand to save wear, till they came near the meeting-house, when they would put them on. They were glad, when engaged in their work, in a short gown and petticoat of some coarser material, with a striped apron, calicoes being thought quite a dressy article. The household furniture was rude and coarse; carpets, sofas, pianos, were unheard of; instead of them was the spinning-wheel, both small and great, and the loom—articles, if less ornamental, certainly more indispensable. Tea and coffee were almost unknown; broths of various kinds, corn, beans, and barley bread, were in constant use. In many families, hasty-pudding with milk, if milk could be had, was almost the standing supper. For a lunch in the intermission of public worship on the Sabbath, instances were not wanting of men carrying in their pockets a few cold boiled potatoes, and nothing else. Sometimes, in winter, families were conveyed to meeting through the deep snow on an ox-sled; in summer the man, if he were owner of a horse, rode to meeting with his wife seated on a pillow behind him, and a child seated on a pillow before him; and sometimes another and smaller child in the mother's lap, encircled by one of her arms. A party of the smart young people were assembled at a neighbor's in early times, for a social interview. The supper, what was it? Not a modern supper of corned turkey and oysters, but *hasty-pudding and milk!* There being but three spoons, one division of three guests sat down to the table, and another division, and so on till all were served. All went off well, and it was considered a fashionable and well-managed affair.

"That age has been called 'the age of homespun.' It was an age of hard work and simple fare; interspersed on the part of the men with trainings, musters, raisings, huskings, wrestling matches, shagging-bees, and pilling-bees; and in the female world with quilings, apple-parings, and carding-bees. If the rude dwellings were not often animated with the face of visitors, they were daily enlivened with the buzzing of wheels, and the clatter of looms. If the homes had fewer means of high wrought excitement, they were productive of the sources of contentment and tranquil enjoyment."

☞ Eight accidents in one week occurred recently, in London, from persons slipping upon pieces of orange-peel, which had been thrown upon the pavement.

A HOUSE HATH A COUNTENANCE.

Those who have read works upon Architecture, and particularly those of Downing, have frequently met with the term "expression" as applied to it, and it is very likely that only a comparative few have been able to gain any definite conception of its meaning; the remainder, after trying to imagine its intent, have been obliged to relinquish it as too transcendental and intangible for their comprehension. It is the endeavor of this article to make that idea comprehend apparent, by the use of an analogy which will perhaps become more evident, then would at first sight appear, before we get through with it.

Every person in sensible, without much intuition, of the meaning of the term "expression," when applied to the human countenance. You look upon the faces of four chosen persons. That of one is *sensual*, that of another *thoughtful*, that of the third *humble*, while that of the fourth is *angelic*. Persons can be found as to whom this verdict would be rendered, by a jury of a hundred fair minded and moderately accomplished people. What makes this difference? Why, "it is the soul speaking through their faces," replies the first man. They have minds such as their looks indicate, and it is these which you see, and not in truth the clay you seem to look upon. We will not stop this, but will change the case slightly. A Painter shall come with his brush, or a Daguerreian, with his instrument, and they will put these several faces upon canvas or a steel plate, precisely as the living specimens appear before us. Now no man can point a soul, not can a Daguerreotype represent one to us. All that you see as you look at the pictures, is a piece of cloth or steel, and some pigments, representing simply the features which those persons wear; yet those pictures are as fully expressive of the swine, or the sheep, or the lion, or the angel, as their living prototypes; or in other words expression is now predicated of the simple representation of *features*—not living—but existing only in copy.

We can now begin to apprehend our analogy. The human face is made simply of *features*, consisting of chin, lips, nose, ears, eyes, forehead, and a crown of hair. All persons have these same features, and all the multitudinous differences which we see depend solely on the relative size, shape, and color of these features; and such is the variety of them, that among all the millions of the race, not any two are precisely alike. We know no fact, which better illustrates the infinite skill of the Author of the race.

Now let us take four dwellings, consisting of the same number of rooms, of the same size, and all located precisely alike. One of them shall look for all the world like a barn, and the next might be a school house, a town house, or a tannery, for any thing that appears to the contrary; a third has evident, but most ugly, marks of a dwelling, while the fourth is such that every body who sees it, exclaims at once, "beautiful!" It is in fact, such a house as that each one who sees it wishes he lived there. What constitutes the difference in these four dwellings? Their essential features are alike. They have each a foundation, doors, windows, walls, cornices or eaves, and a roof for a crown to the whole. Yet, as in the case of our four human countenances, we have an "expression" so essentially unlike, that the wildest beer does not fail instantly to detect it. And yet it all depends, as in the previous case, on the relative size, shape, and color of these features. A mason will, we think, by this time, not fail to comprehend the idea attached to the term "expression."

The next matter to be considered is its utility; for there are those who will always ask and rightly too "*cui bono*," though most of them will put it in English, and say "to what does it amount?" It amounts to precisely this, and no more. It is simply the difference between ugliness and beauty. If any one prefers the former in preference to the latter, we cannot stop to argue the question with him; since it is a matter of *taste*, in which, in more senses than one, there is "no be no disputing." But most, if not all people, prefer, or at least admire a beautiful human countenance, rather than an ugly one; and most people will prefer a beautiful house rather than an ugly one, when once their hands has been but a little cultivated. A house may answer all the mere *uses* of a dwelling, precisely as well, if beauty is despised in its structure, as if it is regarded. So may the human face answer all its uses, with lead colored eyes, wide and flabby cheeks, a pug nose, and a round mouth and wide chin, and a low retreating forehead crowned with hair as red as a brick; as if all these features were after a model more admired. The first and chief design of features, is found in the uses to which they are put. The nose is for smelling and breathing; the mouth for eating and speaking; the eyes for seeing, and the hair for protection. So the foundation of a house is for support, the doors for entrance, the windows for light, the roof for protection, and the chimneys for smoke and ventilation. Yet God in His work of fitting up a residence for the soul, has added, in many cases, that superior attribute, beauty, which is meant for pleasure and refinement; and He has given facilities for securing it in all cases, for human beauty is a thing of culture as much as are roses; and why should we not follow His example in fitting up a residence for the body?

There is in fact a sort of distant and partially intangible analogy between the separate features of the face and the dwelling. We will suppose the walls of the face and the house to answer to each other. The mouth to answer for the door, the windows for the eyes, the roof for the hair; and its overhanging cornice to have no faint resemblance in the pendant locks and ringlets which shade the countenance divine; while no one can fail at a glance to see that the chimney, though not analogous in location, is so in use and intention, to that most important and prominent feature, the nose.

Now if one really loses a head with hair shared close to the scalp, he ought by inference to love a house without eaves or cornice; if he loves it merely *cropped* like a roundhead, he might take up with the Grecian style; but if he admires a fair shading of locks and ringlets, he will certainly have to come to some of our styles, which require a generously overhanging eave to his dwelling. If he is content with brownless and dull looking eyes, he may be also content with undormed and bare windows, and if a pug nose does not offend him, he should by all means not reject a corresponding chimney, for there are, in fact, more pug chimneys than pug noses, and we have even seen such, on a dwelling constructed at an expense of ten thousand dollars.

It does not lessen the use of the eyes that they are bright and sparkling; nor of the hair that it shades, in a proper degree, the face, nor of the nose that it is symmetrical. So neither is the chimney any less adapted to carry off smoke, because it is of proper height and contour, nor the windows any less useful for light if properly shaped and shaded, nor are the walls less fitted to regulate the temperature within, because suitably colored. On this last point let us stretch our analogy a little further. What colors do we not love in the human face? There are few who admire a staring white, for such belongs to the dead, and not to the living. Why should that color any more easily suit us in the dwelling? There are fewer still, who love a black or a blue so dingy that its face gives doubt; why shall we run after these wretched browns and brindles for our houses? The color which best becomes the human face, is a white, *suffused* with red, or with some of the browner or less striking hues varied to suit sex, age and condition. Mr. Downing, once advised people who were looking for colors to their houses, to examine the earth where they stand, and copy that. We would rather advise them to look at the human face, and without copying its hues, to follow the obvious analogies.

A house has properly no soul, nor more has a human portrait; and yet, the first as well as the last, may be made to appear as if it had one. It may at least have a living expression.—*Page in Farmer.*

A ROMANCE IN A PARAGRAPH.—Of Mr. McDiarmid, proprietor of the Dumfries Courier, the following incident is related: "About eighteen years ago a poor wandering female, carrying a baby in her arms, begged a night's lodging at a farm-house not far from Dumfries. She was sheltered in an out-house, and in the morning the mother was found cold in death, and the living infant still clinging to her bosom. His heart was touched by such a tale; he related it simply and affectingly, and in the London papers it met the eye of a lady of rank, then mourning the loss of an only daughter. She made inquiry if the little orphan was a female, and, this happily being the case, she determined at once to adopt it. Though names were carefully concealed, that the child might never in after life learn its origin, the most respectable reference were given to the parish authorities, who gladly gave up the child. She was carried to London, baptized into the Church of England, with much ceremony, and is probably now entering, at the age of eighteen, on all the gayeties of fashionable life. She is at least the heroine of a romance of real life—an actual romance created by the pen of Mr. McDiarmid."

THE CANARY BIRD.—In its native country the Canary Islands, this bird is of a grayish green color, instead of the light yellow with which we should naturally expect to see it clothed in its own legitimate place of abode. This peculiarity has often been remarked by observing travellers.—*Walks abroad and Evenings at Home.*

City Scenes.

NOT TO BE HUMBUGGED.

CITY LADY.—"Won't you allow me to take your hat, Cox?"

YANKEE COUSIN.—"Take my hat! Jaroos'lem! No! I hears tell o' yer tricks in New York!"—*Lantern.*

Wit and Humor.

A SHARP CORRESPONDENCE.—A contemporary says:—The pages of Punch rarely furnish better specimens of "sharp correspondence" than the following, which comes to us through the post-office, with an assurance that it actually passed between two respectable ladies of this city, the names being the only fictions in the whole:—

MRS. JONES TO MRS. SMITH.

Mrs. Jones regrets that Mrs. Smith has found it necessary to propagate the report that her little boy has "dirt and things in his head," and consequently that she can't allow her Willie to play with him, which expression came from Mrs. Smith. Such a report is false and malicious; as anybody who knows Mrs. J. and her habits, will know it to be untrue. Mrs. J. suggests to Mrs. S. that before making assertions likely to wound a mother's feelings, she should be certain that they are just.

MRS. SMITH IN REPLY TO MRS JONES.

Mrs. Smith's compliments to Mrs. Jones; and in reply to Mrs. Smith's polite note, would assure her that not being aware that there was such a person as Mrs. J., and not knowing she had a little boy, nor that he had "dirt and things in his head," the inference is, that she did not assert that such was the case, and further, not knowing that there was a Mrs. J., nor what were her habits, nor that she had a little boy, nor what was the condition of his head, she did not falsely and maliciously propagate the report that Mrs. J. had a little boy who had "dirt and things in his head." Mrs. S. denying all malice, admits that she did forbid her Willie playing with the boys in the street, because he was in the habit of getting dirt in his own head; and Mrs. S. would suggest the probability that a wrong version of this injunction communicated to Mrs. J. by her "little boy," has been the means of wounding "a mother's heart."

PUT THEY IMPUDENT RASCAL OUT!—While the congregation were collecting at church, on a certain occasion, an old, dark, hard featured, skin and bone individual, was seen wending his way up the aisle, and taking his seat near the pulpit. The officiating minister was one of that class who detested written sermons, and as for prayers, he thought that they ought to be the natural outpourings of the heart. After the singing was concluded, the house, as usual, was called to prayer. The genius we have introduced did not kneel, but leaned his head devoutedly on the back of the pew. The minister began by saying:

"Father of all, in every age, in saint and by savage adored."—"*Pope*," said a low, but clear voice, near old hard features. The minister, after casting an indignant look in the direction of the voice, continued: "whose throne stretches on the adamantine hills of Paradise"—"*Milton*," again interrupted the voice. The minister's lips quivered for a moment, but recovering himself, began, "we thank Thee, most gracious Father, that we are permitted to assemble once more in Thy name, while others, equally meritorious, but less favored, have been carried beyond that bourne from which no traveller returns"—"*Shakspeare*," interrupted the voice: this was too much, "put that impudent rascal out," shouted the minister—"*original*," ejaculated the voice, in the same calm but provoking manner.

A FATHERLY AGREEMENT.—A good anecdote is related of Governor Dudley and Judge Sewall, two honored patriarchs of this State. The son of the latter married the daughter of the former, and in due time after the marriage, Judge Sewall, then sitting at the Council Board in this city, received a letter, informing him that his daughter-in-law was delivered of a fine son, he communicated the billet to the Governor, who, after perusing it, observed, with an arch severity,

"Brother Sewall, I am thinking how we shall prevent this grandson of ours from being as great a fool as his father."

"I believe, brother Dudley," retorted Judge Sewall, "we must not let him nurse his mother."—*Boston Sat. Gazette.*

I WAS JUST THINKING OF IT.—Some fifty years ago—a member of the Legislature of New Hampshire possessing the same kind of knowledge that multitudes have in these days, to know everything as soon as intended or suggested by others, was in the habit of following every proposed resolve, with—I was just thinking of it. An arch brother member, to try his wisdom, very proposed a resolve, (being in the time of war, when salt was scarce,) that every farmer should sow a bushel of salt the following year, to raise his own; to which he eagerly seconded the motion, saying—"I was just thinking of it."

A LEARNED WAITER.—A pedantic fellow called for a bottle of hock at a tavern, which the waiter not hearing distinctly, asked him to repeat.

"A bottle of hock—hic—hac—hoch," repeated the visitor.

After waiting, however, for a long time, and no hock appearing, he ventured to ring again, and inquire into the cause of the delay.

"Did I not order some hock, sir? Why is it not brought in?"

"Because," answered the waiter, who had been taught Lettin grammar, "you afterwards *declined it.*"

MISERABLE.—Some wretched fellow has written a book called "Miseries of Human Life;" this is a sample of the manner in which he vents his spleen:

What is the difference between a bare head and a hair bed? A bare head fines for a shelter; a hair bed's a shelter for fines.

What throat is best for a singer to reach high notes? Ans: A *sour* throat.

What city is most opposed to the introduction of gas? Spermaceti.

It is sometimes pleasant to be found "not at home"—never, to be *found out.*

MASCULINE AND FEMININE.—Punch very slanderously makes use of the following:—

"The sun is called masculine from his supporting and sustaining the moon, and in finding her the withal to shine away as she does of a night, and from his being obliged to keep such a family of stars besides. The moon is feminine, because she is constantly changing, just as a ship is blown about by every wind. The church is feminine—because she is married to the state. And time is masculine because he is trifled with by the ladies."

COLLEGE'S SAVIOUR THEM.—Some people are dreadful hard to please. An actor who was intensive and on the stage, was roundly hissed.—He was advertised the next evening, but did not go near at all. On his next performance he was received with great disapprobation. He turns d to a companion, and said, "On Monday I was a drunk, but appeared—they didn't like that; and Wednesday I was drunk, and didn't appear—and they don't like that. What the rule chief would they have?"

☞ It appears, from the *Court Journal*, that Queen Victoria has adopted the fashion of wearing a bonnet bonnet.

THE STAR OF HOME.

When traveller loins his homeward path is wending,
Far from the kindly door,
And sees the gloomy night anon descending,
Over the trackless moor—
When dirkled moor around his steps is wreathing,
And north winds from afar,
Their hoarse, sonorous clamorings are breathing,
Like steeds prepared for war;
There is a star, which polar like, is burning,
For those who wandering roam;
To this, the wanderer's eye, with joy, is turning,—
It is the Star of Home.

And where, across the dreary waste of ocean
The gallant barque is driven,
And o'er the land, mingle in dire commotion,
The elements of heaven;
The element of heaven, that doth lower under a
table, in the attitude of a dog—there to back
three several times, and between every bark to
declare aloud, that "he had lied like a dog!"

It was a saying of him who never spoke ansion
"*Judge not lest ye be judged.*" How careful
then should we be of the character of others—
knowing that God also will judge us, and remembering also our imperfections, and that a good name is one of the most desirable things in life, and a valuable inheritance for our children. True charity to mankind teaches us to do to others as we would be done by. An observance of this Christian rule would give the death-blow to slander.—*Boston Journal.*

A BEAUTIFUL CUSTOM.

We read in Grecian history of a very beautiful custom practised by the Molossians:

Themistocles, the great man and warrior to whom were given the "palm of wisdom and skill, with a crown of olive, and the best chariot that Sparta possessed," was once driven by the Athenians to Epirus, because supposed to be in league with conspirators. He took refuge in the house of Admetus, King of the Molossians. Admetus being absent, Themistocles applied to the Queen, and prayed for refuge.—She received him, and in order to insure him favor in the eyes of her lord, she placed her little infant in his arms, and bade him sit near the hearth.

This was the most sacred manner of supplication, and held in such reverence by the Molossians, that whatever had been the disturbance, the innocent eyes of the babe generally effected a reconciliation.

How touching must have been this sight!—The renowned statesman who had received the applause of nations, who had been held in the highest estimation as a warrior and great public benefactor—whose deeds poets had sung, whose brow fame had wreathed, sitting in the attitude of a suppliant, with a speechless infant as his mediator. There is something of sublimity about such a thought, inasmuch as infant purity is akin to Divinity. Little knew the babe as its gentle eyes were raised smilingly to the face of its austere father, that on its very helplessness rested the protection of a life made powerful by great and daring deeds. It grasped no sceptre in its dimpled hands; it held no pen to sign the instrument of pardon; it could not even totter towards the King, and falling on its little knees, beg for mercy; it had no royal prerogative; it was no conqueror in its childish attributes, than the son of the poorest peasant. But it was an innocent babe—an emblem of that charity which forgiveth all things; a type of that state which must be attained before heaven can be beautiful to the travel-stained soul.

Holy childhood! Whether as the mediator between man and man—whether as the prince or the beggar, out from thy soft eyes look love and forgiveness, trust and consolation. And more than heart has known, or eye has seen, hast thou been the salvation of those who deem that in themselves dwell all the wisdom and knowledge of the world.—*Olive Branch.*

CHURCHES IN HOLLAND.—A correspondent of the "Musical World and Times," Professor Weyde, of the New York University, gives the following description of the churches in Holland. It reminds us of our "Meeting-Houses" in the olden time, when the use of stoves and furnaces would have been considered sacrilegious; in consequence of which, at this season, the congregation shivered during the whole service.

No one can doubt the zeal of our forefathers, when he thinks of their sitting in the cold church on the Sabbath for hours, especially on those days when good old Parson Smith boasts in this wise: "I had uncommon assistance, especially in the first prayer: I was about one hour; and I was an hour and a half in sermon: I had uncommon assistance, for an hour in each of the first prayers." Think of that, modern church-goers, in your cushioned pews and comfortable churches! Here is what Prof. Weyde says:

"The churches in Holland were nearly all built before the Reformation, and are therefore better adapted to the style of Roman Catholic worship than to that of Protestant. Several thousand from three thousand to four thousand seats, and still a large entry place around; in some, only a fourth or a still smaller portion of the edifice is used. The buildings are mostly old, never heated by stoves, and therefore cold, unhealthy, and, to say the least, uncomfortable. This explains what Mr. Mason mentioned, viz: that it was customary for people to take off their hats only when singing and at prayer. In some old churches, with large towers attached to them, the draught of air makes the churches sometimes so cold that the preacher himself has to put on his hat during the sermon. If the organist cannot play with gloves on, he suffers extremely in Winter, as the keys of the organ are always icy cold during frost."

HOW TO MAKE A READER.—Mr. Cobden, in a late speech, said: "If you put into the hands of the rural peasant treatises on science, extracts from history, or books of travel, they will afford no stimulus or excitement to such people, and they either will not read them at all or they will very soon fall asleep over them. Follow them to the village green or to the public house, and you will find that their conversation does not turn upon the wonderful Fall of Niagara, or the Vale of Chamouni, or the capitols of Alexander, but you will hear him say this: 'When did Tim Giles kill his pig?'—(laughter)—or, 'How many quarters to the acre does Farmer Smith get from such a field of wheat?' Or if he travels at all from his village, it is only in the case of some great accident, or that of a bridge being swept away by some great flood. These are the topics that excite his sympathies, and to make him become a reader at all, you must encourage cheap local newspapers. Every market town should have its local sheet, containing all the local news of the neighborhood, report of accidents, the sums of the petty and quarter sessions and county courts. Those would excite his sympathies; these would make him a reader; when you have succeeded in this, you may then give him something more enlarged, and comprehensive, and wise."

OCCUPATIONS OF THE ROYAL CHILDREN.—The following details of the manner in which the day is filled up by the children of Queen Victoria, are given by *The Field*, a new sporting paper, "on reliable authority:" They rise early, breakfast at eight, and dine at two. Their various occupations are allotted out with almost military exactness. One hour finds them engaged in the study of the ancient, another of the modern authors—their acquaintanceship of languages being first founded on a thorough knowledge of their grammatical construction, and afterward familiarized and perfected by conversation. Next they are trained in their military exercises which give dignity and bearing. Another hour is agreeably filled up with the lighter accomplishments of music and dancing. Again the little party assemble in the riding school, where they may be seen deeply interested in the various evolutions of the message. Thence, while drawing and the further exercise of music and the lighter accomplishments call off the attention of their sisters, the young princes proceed to busily engage themselves in a carpenter's shop, fitted up expressly for them, with tools essential to a perfect knowledge of the craft. They thus early become not only theoretically but practically acquainted with the useful arts of life: a small laboratory is occasionally brought into requisition, at the instance of their father. The dose, the young carpenters and students throw down their saws and axes, unbuckle their philosophy, and shoulder their miniature percussion guns—which they handle with the dexterity of practical sportsmen—for a shooting stroll through the Royal Gardens. The evening meal, the preparation for the morning's lessons, and brief religious instruction, close the pretty day.

LOOK AT THE WHOLE MAN.—"*Better a dinner of herbs a fowl, than a public without one.*" Here, to my mind, is the assertion of a great Christian truth, and of one which reaches deep down to the very foundations of Christian morality, the more valuable, as coming to us from a people—the Chinese—beyond the range and reach of the influences of direct revelation. We may not be all aware of the many and malignant assaults which were made on the Christian faith, and on the morality of the Bible, through the character of David, by the blind and self-righteous deists of a century or more ago. Taking the Scripture testimony about him, that he was the man after God's heart, and putting beside this the record of those great sins which he committed, they sought to set those great, yet still isolated, offences in the most hateful light, and then to bring at once him, and those who praised him, alike to shame. But all the while *the man*, what he was—with this, with the moral sum total of his life, to which alone the Scripture testimony bore witness—they concerned themselves not at all: which yet was a far more important question than what any of his single acts may have been, and that which, in the estimate of his character, was really at issue. We answer, *a diamond*, which, if a diamond *with a flaw*, as are all but the one "whole and perfect chrysolite," would yet outvalue a mountain of *pebbles without one*, such as they were—even assuming the pebbles to be without—and not merely to seem so, because their flaw was all-pervading one, and could not quickly detected, inasmuch as the contrast was wanting of any clearer material, which should at once reveal its presence.—*Trench.*

"ROSES looks there are so holy,
They seem but given, they seem but given,
As shining beacons, to lead
To light to heaven, to light to heaven;
While some—oh! we've believe them—
With tempting ray, with tempting ray.
Would lead us (God forgive them!)
The other way, the other way."

For the Young.

FLAME.

Q. Why is a *rush-light* extinguished more readily than a cotton wick candle?

A. Because a hard rush imbibes the melted fat or wax much more slowly than porous cotton; as it imbibes less fat, it supplies a smaller volume of combustible gas, and, of course, the light is more easily extinguished.

Q. Why is it more difficult to blow out a *cotton wick* than a *rush-light?*

A. Because porous cotton, imbibes the melted fat or wax, much more readily than hard rush; as it imbibes more fat, it supplies the flame with a larger volume of *combustible gases*; and, of course, the light is with more difficulty extinguished.

Q. Why is a *gas flame* more easily extinguished when the jet is very slightly turned on, than when it is in full stream?

A. Because there is less volume of combustible gases in the small flame, than in the full blaze.

Q. Why does an *extinguisher* put a candle out?

A. Because the air in the extinguisher *is soon exhausted of its oxygen* by the flame; and when there is no oxygen flame goes out.

Q. Why does not a candle set fire to a *piece of paper* twisted into an extinguisher, and used as such?

A. 1st.—Because the flame very soon *exhausts the oxygen* contained in the paper extinguisher; and

2nd.—The flame invests the *inside of the paper extinguisher* with *carbonic acid gas*, which prevents it from blazing.

Q. Why is a *long wick* never upright?

A. Because it is bent by its own *weight*.

Q. A *long wick* is covered with an *efflorescence* at the top. What does this arise from?

A. The knotty or flowery appearance of the top of a wick arises from an accumulation of particles *partly separated* but still loosely hanging to the wick.

Q. Why do *common candles* require *snuffing?*

A. Because the heat of the flame is *not sufficient to consume the wick*; and the longer the wick grows the *less* the flame produces.

Q. Why do *wax* candles never need *snuffing?*

A. Because the *wick* of *wax* candles is made of *very fine thread*, which the heat of the flame is sufficient to consume. The wick of *tallow* candles (on the other hand,) is made of *coarse* cotton, which is too substantial to be consumed by the heat of the flame, and must be cut off by snuffers.

Q. Why does a *pin* stuck in a *rush-light extinguish it?*

A. Because a *pin* (being a good conductor) *carries away the heat of the flame from the wick*, and prevents the combustion of the tallow.

Q. What is the *smoke* of a *candle?*

A. Solid particles of carbon, separated from the wick and tallow, but not consumed.

Q. Why are *some* particles consumed and not *others?*

A. The *combustion of the carbon* depends upon its *combining with the oxygen of the air*; now as the *outer surface* of the flame *prevents the access of air to the interior parts*, much of the carbon of those parts passes off in smoke.

☞ Hard wood makes a candle *brighter*, especially just previous to its being *burnt out*.

A. Because it is *unequally* supplied with combustible gases. When a candle is nearly burnt out, there is not sufficient tallow or wax to keep up the regular supply of combustible gas; in consequence of which, the flame *flickers*, that is, *dances*, when it is supplied with gas, and *goes out* for a moment when the supply is defective.—*From "Familiar Science," edited by R. E. Peterson.*
